

# ETSI TS 125 105 v8.6.0 (2010-02)

*Technical Specification*

**Universal Mobile Telecommunications System (UMTS);  
Base Station (BS) radio transmission and reception (TDD)  
(3GPP TS 25.105 version 8.6.0 Release 8)**

***Important notice***

Individual copies of the present document can be downloaded from:  
<http://www.etsi.org>

The present document may be made available in more than one electronic version or in print. In any case of existing or perceived difference in contents between such versions, the reference version is the Portable Document Format (PDF). In case of dispute, the reference shall be the printing on ETSI printers of the PDF version kept on a specific network drive within ETSI Secretariat.

Users of the present document should be aware that the document may be subject to revision or change of status.  
Information on the current status of this and other ETSI documents is available at  
<http://portal.etsi.org/tb/status/status.asp>

If you find errors in the present document, please send your comment to one of the following services:

## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

---

## Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under  
<http://webapp.etsi.org/key/queryform.asp>.

| Intellectual Property Rights .....   | 2  |
| Foreword.....  | 2  |
| Foreword.....  | 9  |
| 1    Scope .....   | 10 |
| 2    References .....  | 10 |
| 3    Definitions, symbols and abbreviations .....                              | 10 |
| 3.1    Definitions.....  | 10 |
| 3.2    (void).....   | 11 |
| 3.3    Abbreviations .....   | 11 |
| 4    General .....   | 12 |
| 4.1    Relationship between Minimum Requirements and Test Requirements .....   | 12 |
| 4.2    Base station classes .....  | 12 |
| 4.3    Regional requirements.....  | 12 |
| 4.4    Environmental requirements for the BS equipment .....                   | 13 |
| 4.5    MBSFN-only operation.....   | 14 |
| 5    Frequency bands and channel arrangement.....                              | 14 |
| 5.1    General .....   | 14 |
| 5.2    Frequency bands.....  | 14 |
| 5.3    TX-RX frequency separation .....  | 14 |
| 5.3.1    3,84 Mcps TDD Option .....  | 14 |
| 5.3.2    1,28 Mcps TDD Option.....   | 14 |
| 5.3.3    7.68 Mcps TDD Option.....   | 15 |
| 5.4    Channel arrangement.....  | 15 |
| 5.4.1    Channel spacing.....  | 15 |
| 5.4.1.1    3,84 Mcps TDD Option.....   | 15 |
| 5.4.1.2    1,28 Mcps TDD Option.....   | 15 |
| 5.4.1.3    7.68 Mcps TDD Option.....   | 15 |
| 5.4.2    Channel raster .....  | 15 |
| 5.4.2.1    3.84 Mcps TDD Option.....   | 15 |
| 5.4.2.2    7.68 Mcps TDD Option.....   | 15 |
| 5.4.3    Channel number .....  | 15 |
| 6    Transmitter characteristics .....   | 16 |
| 6.1    General .....   | 16 |
| 6.2    Base station output power .....   | 17 |
| 6.2.1    Base station maximum output power.....                                | 17 |
| 6.2.1.1    Minimum Requirement .....   | 17 |
| 6.3    Frequency stability .....   | 17 |
| 6.3.1    Minimum Requirement .....   | 17 |
| 6.3.1.1    3,84 Mcps TDD Option.....   | 17 |
| 6.3.1.2    1,28 Mcps TDD Option.....   | 17 |
| 6.3.1.3    7,68 Mcps TDD Option.....   | 17 |
| 6.4    Output power dynamics.....  | 18 |
| 6.4.1    Inner loop power control.....   | 18 |
| 6.4.2    Power control steps.....  | 18 |
| 6.4.2.1    Minimum Requirement .....   | 18 |
| 6.4.3    Power control dynamic range .....                                     | 18 |
| 6.4.3.1    Minimum Requirement .....   | 18 |
| 6.4.4    Minimum output power .....  | 18 |
| 6.4.4.1    Minimum Requirement .....   | 19 |
| 6.4.5    Primary CCPCH power .....   | 19 |
| 6.4.6    Differential accuracy of Primary CCPCH power.....                     | 19 |
| 6.4.6.1    Minimum Requirement for Differential accuracy of PCCPCH power ..... | 19 |

|               |   |    |
|---------------|---|----|
| 6.5           | Transmit ON/OFF power .....   | 19 |
| 6.5.1         | Transmit OFF power.....   | 19 |
| 6.5.1.1       | Minimum Requirement .....   | 19 |
| 6.5.1.1.1     | 3,84 Mcps TDD Option.....   | 19 |
| 6.5.1.1.2     | 1,28 Mcps TDD Option.....   | 19 |
| 6.5.1.1.3     | 7,68 Mcps TDD Option.....   | 19 |
| 6.5.2         | Transmit ON/OFF Time mask.....  | 20 |
| 6.5.2.1       | Minimum Requirement .....   | 20 |
| 6.5.2.1.1     | 3,84 Mcps TDD Option.....   | 20 |
| 6.5.2.1.2     | 1,28 Mcps TDD Option.....   | 20 |
| 6.5.2.1.3     | 7,68 Mcps TDD Option.....   | 20 |
| 6.6           | Output RF spectrum emissions.....   | 21 |
| 6.6.1         | Occupied bandwidth .....  | 21 |
| 6.6.1.1       | 3,84 Mcps TDD Option.....   | 21 |
| 6.6.1.2       | 1,28 Mcps TDD Option.....   | 21 |
| 6.6.1.3       | 7,68 Mcps TDD Option.....   | 21 |
| 6.6.2         | Out of band emission .....  | 21 |
| 6.6.2.1       | Spectrum emission mask.....   | 21 |
| 6.6.2.1.1     | 3,84 Mcps TDD Option.....   | 21 |
| 6.6.2.1.2     | 1,28 Mcps TDD Option.....   | 23 |
| 6.6.2.1.3     | 7,68 Mcps TDD Option.....   | 25 |
| 6.6.2.2       | Adjacent Channel Leakage power Ratio (ACLR).....  | 27 |
| 6.6.2.2.1     | Minimum Requirement .....   | 27 |
| 6.6.2.2.1.1   | 3,84 Mcps TDD Option .....  | 27 |
| 6.6.2.2.1.2   | 1,28 Mcps TDD Option .....  | 28 |
| 6.6.2.2.1.3   | 7,68 Mcps TDD Option .....  | 28 |
| 6.6.2.2.2     | Additional requirement for operation in the same geographic area with FDD or unsynchronised TDD on adjacent channels..... | 28 |
| 6.6.2.2.2.1   | 3,84 Mcps TDD Option .....  | 28 |
| 6.6.2.2.2.1.1 | Additional requirement for operation in the same geographic area with unsynchronised TDD on adjacent channels.....        | 28 |
| 6.6.2.2.2.1.2 | Additional requirement for operation in the same geographic area with FDD on adjacent channels.....                       | 29 |
| 6.6.2.2.2.2   | 1,28 Mcps TDD Option .....  | 29 |
| 6.6.2.2.2.2.1 | Additional requirement for operation in the same geographic area with unsynchronised TDD on adjacent channels.....        | 29 |
| 6.6.2.2.2.2.2 | Additional requirement for operation in the same geographic area with FDD on adjacent channels.....                       | 30 |
| 6.6.2.2.2.3   | 7,68 Mcps TDD Option .....  | 30 |
| 6.6.2.2.2.3.1 | Additional requirement for operation in the same geographic area with unsynchronised TDD on adjacent channels.....        | 30 |
| 6.6.2.2.2.3.2 | Additional requirement for operation in the same geographic area with FDD on adjacent channels.....                       | 31 |
| 6.6.2.2.3     | Additional requirement in case of co-siting with unsynchronised TDD BS or FDD BS operating on an adjacent channel.....    | 31 |
| 6.6.2.2.3.1   | 3,84 Mcps TDD Option .....  | 32 |
| 6.6.2.2.3.1.1 | Additional requirement in case of co-siting with unsynchronised TDD BS operating on an adjacent channel .....             | 32 |
| 6.6.2.2.3.1.2 | Additional requirement in case of co-siting with FDD BS operating on an adjacent channel .....                            | 32 |
| 6.6.2.2.3.2   | 1,28 Mcps TDD Option .....  | 32 |
| 6.6.2.2.3.2.1 | Additional requirement in case of co-siting with unsynchronised TDD BS operating on an adjacent channel .....             | 32 |
| 6.6.2.2.3.2.2 | Additional requirement in case of co-siting with FDD BS operating on an adjacent channel .....                            | 33 |
| 6.6.2.2.3.3   | 7,68 Mcps TDD Option .....  | 33 |
| 6.6.2.2.3.3.1 | Additional requirement in case of co-siting with unsynchronised TDD BS operating on an adjacent channel .....             | 33 |
| 6.6.2.2.3.3.2 | Additional requirement in case of co-siting with FDD BS operating on an adjacent channel .....                            | 34 |
| 6.6.3         | Spurious emissions .....  | 35 |
| 6.6.3.1       | Mandatory Requirements .....  | 35 |

|               |  |    |
|---------------|--|----|
| 6.6.3.1.1     | Spurious emissions (Category A) .....                | 35 |
| 6.6.3.1.1.1   | Minimum Requirement.....                             | 35 |
| 6.6.3.1.1.1.1 | 3,84 Mcps TDD Option.....                            | 35 |
| 6.6.3.1.1.1.2 | 1,28 Mcps TDD Option.....                            | 35 |
| 6.6.3.1.1.1.3 | 7,68 Mcps TDD Option.....                            | 36 |
| 6.6.3.1.2     | Spurious emissions (Category B) .....                | 36 |
| 6.6.3.1.2.1   | Minimum Requirement.....                             | 36 |
| 6.6.3.1.2.1.1 | 3,84 Mcps TDD Option.....                            | 36 |
| 6.6.3.1.2.1.2 | 1,28 Mcps TDD Option.....                            | 37 |
| 6.6.3.1.2.1.3 | 7,68 Mcps TDD Option.....                            | 37 |
| 6.6.3.2       | Co-existence with GSM 900 .....                      | 38 |
| 6.6.3.2.1     | Operation in the same geographic area.....           | 38 |
| 6.6.3.2.1.1   | Minimum Requirement.....                             | 38 |
| 6.6.3.2.2     | Co-located base stations .....                       | 38 |
| 6.6.3.2.2.1   | Minimum Requirement.....                             | 38 |
| 6.6.3.3       | Co-existence with DCS 1800 .....                     | 38 |
| 6.6.3.3.1     | Operation in the same geographic area.....           | 38 |
| 6.6.3.3.1.1   | Minimum Requirement.....                             | 38 |
| 6.6.3.3.2     | Co-located base stations .....                       | 39 |
| 6.6.3.3.2.1   | Minimum Requirement.....                             | 39 |
| 6.6.3.4       | Co-existence with UTRA-FDD.....                      | 39 |
| 6.6.3.4.1     | Operation in the same geographic area.....           | 39 |
| 6.6.3.4.1.1   | Minimum Requirement.....                             | 39 |
| 6.6.3.4.2     | Co-located base stations .....                       | 40 |
| 6.6.3.4.2.1   | Minimum Requirement.....                             | 40 |
| 6.6.3.5       | Co-existence with unsynchronised TDD.....            | 41 |
| 6.6.3.5.1     | Operation in the same geographic area.....           | 41 |
| 6.6.3.5.1.1   | Minimum Requirement.....                             | 41 |
| 6.6.3.5.1.1.1 | 3,84 Mcps TDD option.....                            | 41 |
| 6.6.3.5.1.1.2 | 1,28 Mcps TDD option.....                            | 42 |
| 6.6.3.5.1.1.3 | 7,68 Mcps TDD option.....                            | 42 |
| 6.6.3.5.2     | Co-located base stations .....                       | 43 |
| 6.6.3.5.2.1   | Minimum Requirement.....                             | 43 |
| 6.6.3.5.2.1.1 | 3,84 Mcps TDD option.....                            | 43 |
| 6.6.3.5.2.1.2 | 1,28 Mcps TDD option.....                            | 43 |
| 6.6.3.5.2.1.3 | 7,68 Mcps TDD option.....                            | 44 |
| 6.6.3.6       | Co-existence with PHS .....                          | 45 |
| 6.6.3.6.1     | Minimum Requirement .....                            | 45 |
| 6.6.3.6.1.1   | 3,84 Mcps TDD option.....                            | 45 |
| 6.6.3.6.1.2   | (void).....  | 45 |
| 6.6.3.6.1.3   | 7,68 Mcps TDD option.....                            | 45 |
| 6.7           | Transmit intermodulation .....                       | 45 |
| 6.7.1         | Minimum Requirement.....                             | 46 |
| 6.7.1.1       | 3,84 Mcps TDD Option.....                            | 46 |
| 6.7.1.2       | 1,28 Mcps TDD Option: .....                          | 46 |
| 6.7.1.3       | 7,68 Mcps TDD Option.....                            | 46 |
| 6.8           | Transmit modulation .....                            | 46 |
| 6.8.1         | Transmit pulse shape filter.....                     | 46 |
| 6.8.2         | Modulation Accuracy .....                            | 46 |
| 6.8.2.1       | Minimum Requirement .....                            | 46 |
| 6.8.3         | Peak Code Domain Error .....                         | 46 |
| 6.8.3.1       | Minimum Requirement .....                            | 47 |
| 6.8.4         | Relative Code Domain Error for 64QAM modulation..... | 47 |
| 6.8.4.1       | Minimum requirement .....                            | 47 |
| 6.8.5         | Time alignment error in MIMO transmission.....       | 47 |
| 6.8.5.1       | Minimum Requirement .....                            | 47 |
| 7             | Receiver characteristics .....                       | 47 |
| 7.1           | General .....  | 47 |
| 7.2           | Reference sensitivity level.....                     | 48 |
| 7.2.1         | Minimum Requirement.....                             | 48 |
| 7.2.1.1       | 3,84 Mcps TDD Option.....                            | 48 |

|           |  |    |
|-----------|--|----|
| 7.2.1.2   | 1,28 Mcps TDD Option.....                                      | 48 |
| 7.2.1.3   | 7,68 Mcps TDD Option.....                                      | 48 |
| 7.3       | Dynamic range .....  | 49 |
| 7.3.1     | Minimum requirement .....                                      | 49 |
| 7.3.1.1   | 3,84 Mcps TDD Option.....                                      | 49 |
| 7.3.1.2   | 1,28 Mcps TDD Option: .....                                    | 49 |
| 7.3.1.3   | 7,68 Mcps TDD Option.....                                      | 49 |
| 7.4       | Adjacent Channel Selectivity (ACS).....                        | 50 |
| 7.4.1     | Minimum Requirement.....                                       | 50 |
| 7.4.1.1   | 3,84 Mcps TDD Option.....                                      | 50 |

## Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under  
<http://webapp.etsi.org/key/queryform.asp>.

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of this TS, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version 3.y.z

where:

x the first digit:

- 1 presented to TSG for information;
- 2 presented to TSG for approval;
- 3 Indicates TSG approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the specification.

---

## 1 Scope

This document establishes the minimum RF characteristics of all three options of the TDD mode of UTRA. The three options are the 3.84 Mcps, 1.28 Mcps and 7.68 Mcps options respectively. The requirements are listed in different subsections only if the parameters deviate.

---

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the following definitions apply.

**Power Spectral Density:** The units of Power Spectral Density (PSD) are extensively used in this document. PSD is a function of power versus frequency and when integrated across a given bandwidth, the function represents the mean power in such a bandwidth. When the mean power is normalised to (divided by) the chip-rate it represents the mean energy per chip. Some signals are directly defined in terms of energy per chip, (DPCH\_Ec, Ec, and P-CCPCH\_Ec) and others defined in terms of PSD (Io, Ioc, Ior and Ior). There also exist quantities that are a ratio of energy per chip to PSD (DPCH\_Ec/Ior, Ec/Ior etc.). This is the common practice of relating energy magnitudes in communication systems.

It can be seen that if both energy magnitudes in the ratio are divided by time, the ratio is converted from an energy ratio to a power ratio, which is more useful from a measurement point of view. It follows that an energy per chip of X

$\text{dBm}/3.84 \text{ MHz}$  ( $3.84 \text{ Mcps TDD}$  option) or  $X \text{ dBm}/1.28 \text{ MHz}$  ( $1.28 \text{ Mcps TDD}$  option) can be expressed as a mean power per chip of  $X \text{ dBm}$ . Similarly, a signal PSD of  $Y \text{ dBm}/3.84 \text{ MHz}$  ( $3.84 \text{ Mcps TDD}$  option) or  $Y \text{ dBm}/1.28 \text{ MHz}$  ( $1.28 \text{ Mcps TDD}$  option) can be expressed as a signal power of  $Y \text{ dBm}$ .

**Mean power:** When applied to a CDMA modulated signal this is the power (transmitted or received) in a bandwidth of at least  $(1 + \alpha)$  times the chip rate of the radio access mode. The period of measurement shall be a transmit timeslot excluding the guard period unless otherwise stated.

NOTE: The roll-off factor  $\alpha$  is defined in section 6.8.1.

**RRC filtered mean power:** The mean power as measured through a root raised cosine filter with roll-off factor  $\alpha$  and a bandwidth equal to the chip rate of the radio access mode.

NOTE: The RRC filtered mean power of a perfectly modulated CDMA signal is 0.246 dB lower than the mean power of the same signal.

**Code domain power:** That part of the mean power which correlates with a particular (OVSF) code channel. The sum of all powers in the code domain equals the mean power in a bandwidth of  $(1 + \alpha)$  times the chip rate of the radio access mode.

**Output power:** The mean power of one carrier of the base station, delivered to a load with resistance equal to the nominal load impedance of the transmitter.

**Maximum output power:** The mean power level per carrier of the base station measured at the antenna connector in a specified reference condition. The period of measurement shall be a transmit timeslot excluding the guard period.

**Rated output power:** Rated output power of the base station is the mean power level per carrier that the manufacturer has declared to be available at the antenna connector.

**Total power dynamic range:** The difference between the maximum and the minimum output power of the base station for a specified reference condition.

**MBSFN-only operation:** Operation of a dedicated carrier solely for the purposes of MBSFN transmission.

## 3.2 (void)

## 3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

|                               |  |
|-------------------------------|--|
| ACIR                          | Adjacent Channel Interference Ratio  |
| ACLR                          | Adjacent Channel Leakage power Ratio   |
| ACS                           | Adjacent Channel Selectivity   |
| BER                           | Bit Error Rate   |
| BS                            | Base Station   |
| CW                            | Continuous wave (unmodulated signal)   |
| DL                            | Down link (forward link)   |
| DPCH <sub>o</sub>             | A mechanism used to simulate an individual intracell interferer in the cell with one code and a spreading factor of 16   |
| $\frac{DPCH_o - E_c}{I_{or}}$ | The ratio of the average transmit energy per PN chip for the DPCH <sub>o</sub> to the total transmit power spectral density of all users in the cell in one timeslot as measured at the BS antenna connector                                 |
| EIRP                          | Effective Isotropic Radiated Power   |
| FDD                           | Frequency Division Duplexing   |
| FER                           | Frame Error Rate   |
| IMB                           | Integrated Mobile Broadcast  |
| I <sub>oc</sub>               | The power spectral density (integrated in a noise bandwidth equal to the chip rate and normalized to the chip rate) of a band limited white noise source (simulating interference from other cells) as measured at the BS antenna connector. |

|                       |   |
|-----------------------|---|
| $\hat{I}_{\text{or}}$ | The received power spectral density (integrated in a bandwidth $(1+\alpha)$ times the chip rate and normalized to the chip rate) of all users in the cell in one timeslot as measured at the BS antenna connector |
| MBMS                  | Multimedia Broadcast Multicast Service  |
| MBSFN                 | MBMS over a Single Frequency Network  |
| PPM                   | Parts Per Million   |
| Pout                  | Output power.   |
| PRAT                  | Rated Output power  |
| RSSI                  | Received Signal Strength Indicator  |
| SIR                   | Signal to Interference ratio  |
| TDD                   | Time Division Duplexing   |
| TPC                   | Transmit Power Control  |
| UE                    | User Equipment  |
| UL                    | Up link (reverse link)  |
| UTRA                  | UMTS Terrestrial Radio Access   |

## 4 General

### 4.1 Relationship between Minimum Requirements and Test Requirements

The Minimum Requirements given in this specification make no allowance for measurement uncertainty. The test specification 25.142 section 5.9.6 defines Test Tolerances. These Test Tolerances are individually calculated for each test. The Test Tolerances are used to relax the Minimum Requirements in this specification to create Test Requirements. The measurement results returned by the Test System are compared -without any modification- against the Test Requirements as defined by the shared risk principle.

The Shared Risk principle is defined in ETR 273 Part 1 sub-part 2 section 6.5.

### 4.2 Base station classes

The requirements in this specification apply to both Wide Area Base Stations and Local Area Base Stations in co-ordinated network operation, unless otherwise stated.

Wide Area Base Stations are characterised by requirements derived from Macro Cell and Micro Cell scenarios with BS to UE coupling losses equal to 70 dB and 53 dB. The Wide Area Base Station has the same requirements as the base station for General Purpose application in Release 99 for 3.84 Mcps option, and in Release 4 for both 3.84 Mcps and 1.28 Mcps option.

Local Area Base Stations are characterised by requirements derived from Pico Cell scenarios with a BS to UE coupling loss equals to 45 dB.

### 4.3 Regional requirements

Some requirements in TS 25.105 may only apply in certain regions. Table 4.1 lists all requirements that may be applied differently in different regions.

Table 4.1: List of regional requirements.

| Clause number | Requirement  | Comments  |
|---------------|--|---|
| 4.2           | Base station classes   | Only requirements for Wide Area Base Stations shall be applied as regional requirements in Japan.   |
| 5.1           | General  | Only 3.84Mcps and 7.68Mcps TDD options are currently applicable in Japan  |
| 5.2           | Frequency bands  | Some bands may be applied regionally.   |
| 6.2.1         | Base station maximum output power  | In certain regions, the minimum requirement for normal conditions may apply also for some conditions outside the range of conditions defined as normal. |
| 6.6.2.1       | Spectrum emission mask   | The mask specified may be mandatory in certain regions. In other regions this mask may not be applied.  |
| 6.6.3.1.1     | Spurious emissions (Category A)  | These requirements shall be met in cases where Category A limits for spurious emissions, as defined in ITU-R Recommendation SM.329 [1], are applied.    |
| 6.6.3.1.2     | Spurious emissions (Category B)  | These requirements shall be met in cases where Category B limits for spurious emissions, as defined in ITU-R Recommendation SM.329 [1], are applied.    |
| 6.6.3.2.1     | Co-existence with GSM900 - Operation in the same geographic area             | This requirement may be applied for the protection of GSM 900 MS and GSM 900 BTS in geographic areas in which both GSM 900 and UTRA are deployed.       |
| 6.6.3.2.2     | Co-existence with GSM900 - Co-located base stations                          | This requirement may be applied for the protection of GSM 900 BTS receivers when GSM 900 BTS and UTRA BS are co-located.                                |
| 6.6.3.3.1     | Co-existence with DCS1800 - Operation in the same geographic area            | This requirement may be applied for the protection of DCS 1800 MS and DCS 1800 BTS in geographic areas in which both DCS 1800 and UTRA are deployed.    |
| 6.6.3.3.2     | Co-existence with DCS1800 - Co-located base stations                         | This requirement may be applied for the protection of DCS 1800 BTS receivers when DCS 1800 BTS and UTRA BS are co-located.                              |
| 6.6.3.4.1     | Co-existence with UTRA FDD - Operation in the same geographic area           | This requirement may be applied to geographic areas in which both UTRA-TDD and UTRA-FDD are deployed.   |
| 6.6.3.4.2     | Co-existence with UTRA FDD - Co-located base stations                        | This requirement may be applied for the protection of UTRA-FDD BS receivers when UTRA-TDD BS and UTRA FDD BS are co-located.                            |
| 6.6.3.5.1     | Co-existence with unsynchronized TDD - Operation in the same geographic area | This requirement may be applied for the protection of UTRA-TDD BS receivers in same geographic areas in which unsynchronized TDD is deployed.           |
| 6.6.3.5.2     | Co-existence with unsynchronized TDD - Co-located base stations              | This requirement may be applied for the protection of UTRA-TDD BS receivers when UTRA-TDD BS are unsynchronized co-located.                             |
| 6.6.3.6       | Co-existence with PHS  | This requirement may be applied for the protection of PHS in geographic areas in which both PHS and 3.84 Mcps and 7.68 Mcps UTRA TDD are deployed.      |
| 7.5           | Blocking characteristic  | The requirement is applied according to what frequency bands in Clause 5.2 that are supported by the BS.  |
| 7.5.1         | Blocking characteristic Co-location with GSM900 and/or DCS 1800              | This requirement may be applied for the protection of UTRA TDD BS receivers when UTRA TDD BS and GSM 900/DCS1800 BS are co-located.                     |

## 4.4 Environmental requirements for the BS equipment

The BS equipment shall fulfil all the requirements in the full range of environmental conditions for the relevant environmental class from the relevant IEC specifications listed below:

IEC 60 721-3-3 "Stationary use at weather protected locations" [3]

IEC 60 721-3-4 "Stationary use at non weather protected locations" [4]

Normally it should be sufficient for all tests to be conducted using normal test conditions except where otherwise stated. For guidance on the use of test conditions to be used in order to show compliance refer to TS 25.142 [5].

## 4.5 MBSFN-only operation

Only relevant sections are applicable to MBSFN-only operation (which also includes IMB [6]). Furthermore, for the case of IMB, only the 3.84Mcps TDD option shall apply. In the case of section 6 this contains subclauses with explicit indication of which requirements are not applicable to MBSFN-only operation.

# 5 Frequency bands and channel arrangement

## 5.1 General

The information presented in this section is based on the chip rates of 3.84 Mcps, 1.28 Mcps and 7.68 Mcps TDD.

NOTE: Other chip rates may be considered in future releases.

## 5.2 Frequency bands

UTRA/TDD is designed to operate in the following bands;

- a) 1900 - 1920 MHz: Uplink and downlink transmission
- 2010 - 2025 MHz Uplink and downlink transmission
- b) 1850 - 1910 MHz Uplink and downlink transmission
- 1930 - 1990 MHz Uplink and downlink transmission
- c) 1910 - 1930 MHz Uplink and downlink transmission
- d) 2570 - 2620 MHz Uplink and downlink transmission
- e) 2300 - 2400 MHz Uplink and downlink transmission
- f) 1880 - 1920 MHz: Uplink and downlink transmission

Note: Deployment in existing and other frequency bands is not precluded.

The co-existence of TDD and FDD in the same bands is still under study in WG4.

## 5.3 TX-RX frequency separation

### 5.3.1 3,84 Mcps TDD Option

No TX-RX frequency separation is required as Time Division Duplex (TDD) is employed. Each TDMA frame consists of 15 timeslots where each timeslot can be allocated to either transmit or receive.

### 5.3.2 1,28 Mcps TDD Option

No TX-RX frequency separation is required as Time Division Duplex (TDD) is employed. Each subframe consists of 7 main timeslots where all main timeslots (at least the first one) before the single switching point are allocated DL and all main timeslots (at least the last one) after the single switching point are allocated UL.

### 5.3.3 7.68 Mcps TDD Option

No TX-RX frequency separation is required as Time Division Duplex (TDD) is employed. Each TDMA frame consists of 15 timeslots where each timeslot can be allocated to either transmit or receive.

## 5.4 Channel arrangement

### 5.4.1 Channel spacing

#### 5.4.1.1 3.84 Mcps TDD Option

The nominal channel spacing is 5 MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

#### 5.4.1.2 1,28 Mcps TDD Option

The channel spacing is 1.6MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

#### 5.4.1.3 7.68 Mcps TDD Option

The nominal channel spacing is 10 MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

### 5.4.2 Channel raster

The channel raster is 200 kHz for all bands, which means that the carrier frequency must be a multiple of 200 kHz.

#### 5.4.2.1 3.84 Mcps TDD Option

In addition a number of additional centre frequencies are specified according to table 5.1, which means that the centre frequencies for these channels are shifted 100 kHz relative to the general raster.

#### 5.4.2.2 7.68 Mcps TDD Option

In addition a number of additional centre frequencies are specified according to table 5.1, which means that the centre frequencies for these channels are shifted 100 kHz relative to the general raster.

### 5.4.3 Channel number

The carrier frequency is designated by the UTRA absolute radio frequency channel number (UARFCN). The value of the UARFCN in the IMT2000 band is defined in the general case as follows:

$$N_t = 5 * F \quad 0.0 \leq F \leq 3276.6 \text{ MHz}$$

where F is the carrier frequency in MHz.

Additional channels applicable to operation in the frequency band defined in sub-clause 5.2(d) for 3.84 Mcps are defined via the following UARFCN definition:

$$N_t = 5 * (F - 2150.1 \text{ MHz}) \quad 2572.5 \text{ MHz} \leq F \leq 2617.5 \text{ MHz}$$

The 10 additional UARFCN for operations in frequency band defined in sub-clause 5.2(d) for 3.84 Mcps are hence: 2112, 2137, 2162, 2187, 2212, 2237, 2262, 2287, 2312, 2337.

## 6 Transmitter characteristics

### 6.1 General

Unless otherwise stated, the requirements in clause 6 are expressed for a single transmitter antenna connector. In case of MIMO transmission, the requirements apply for each transmitter antenna connector.

Unless otherwise stated the transmitter characteristics are specified at the antenna connector (test port A) with a full complement of transceivers for the configuration in normal operating conditions. If any external apparatus such as a TX amplifier, a filter or the combination of such devices is used, requirements apply at the far end antenna connector (port B).

**Figure 6.0: Transmitter test ports**

## 6.2 Base station output power

The rated output power of the base station is defined in section 3.1.

### 6.2.1 Base station maximum output power

The maximum output power of the base station is defined in section 3.1.

#### 6.2.1.1 Minimum Requirement

In normal conditions, the base station maximum output power shall remain within +2 dB and -2 dB of the manufacturer's rated output power.

In extreme conditions, the Base station maximum output power shall remain within +2.5 dB and -2.5 dB of the manufacturer's rated output power.

In certain regions, the minimum requirement for normal conditions may apply also for some conditions outside the range of conditions defined as normal.

## 6.3 Frequency stability

Frequency stability is ability of the BS to transmit at the assigned carrier frequency. The BS shall use the same frequency source for both RF frequency generation and the chip clock.

### 6.3.1 Minimum Requirement

#### 6.3.1.1 3,84 Mcps TDD Option

The modulated carrier frequency is observed over a period of one timeslot for RF frequency generation. The frequency error shall be within the accuracy range given in Table 6.0.

**Table 6.0: Frequency error minimum requirement**

| BS class      | Accuracy  |
|---------------|-----------|
| Wide Area BS  | ±0.05 ppm |
| Local Area BS | ±0.1 ppm  |

#### 6.3.1.2 1,28 Mcps TDD Option

The modulated carrier frequency is observed over a period of one timeslot for RF frequency generation. The frequency error shall be within the accuracy range given in Table 6.0A.

**Table 6.0A: Frequency error minimum requirement**

| BS class      | Accuracy  |
|---------------|-----------|
| Wide Area BS  | ±0.05 ppm |
| Local Area BS | ±0.1 ppm  |

#### 6.3.1.3 7,68 Mcps TDD Option

The modulated carrier frequency is observed over a period of one timeslot for RF frequency generation. The frequency error shall be within the accuracy range given in Table 6.0B.

**Table 6.0B: Frequency error minimum requirement**

| BS class      | Accuracy       |
|---------------|----------------|
| Wide Area BS  | $\pm 0.05$ ppm |
| Local Area BS | $\pm 0.1$ ppm  |

## 6.4 Output power dynamics

For the case of MBSFN-only operation, this subclause shall not be applicable.

Power control is used to limit the interference level. The transmitter uses a quality-based power control on the downlink.

### 6.4.1 Inner loop power control

Inner loop power control is the ability of the BS transmitter to adjust its code domain power in response to the UL received signal.

For inner loop correction on the Downlink Channel, the base station adjusts the code domain power of a power controlled CCTrCH in response to each valid power control bit received from the UE on the Uplink Traffic Channel based on the mapping of the TPC bits in uplink CCTrCH to downlink CCTrCH. Inner loop control is based on SIR measurements at the UE receiver and the corresponding TPC commands are generated by the UE.

### 6.4.2 Power control steps

The power control step is the step change in the DL code domain power in response to a TPC message from the UE.

#### 6.4.2.1 Minimum Requirement

Down link (DL) power steps: 1, 2, 3 dB

The tolerance of the code domain power and the greatest average rate of change in code domain power due to the power control step shall be within the range shown in Table 6.1.

**Table 6.1: power control step size tolerance**

| Step size | Tolerance     | Range of average rate of change in code domain power per 10 steps |             |
|-----------|---------------|---|-------------|
|           |               | minimum   | maximum     |
| 1dB       | $\pm 0.5$ dB  | $\pm 8$ dB  | $\pm 12$ dB |
| 2dB       | $\pm 0.75$ dB | $\pm 16$ dB   | $\pm 24$ dB |
| 3dB       | $\pm 1$ dB    | $\pm 24$ dB   | $\pm 36$ dB |

### 6.4.3 Power control dynamic range

The power control dynamic range is the difference between the maximum and the minimum code domain power of one power controlled code channel for a specified reference condition

#### 6.4.3.1 Minimum Requirement

Down link (DL) power control dynamic range shall be greater or equal to 30 dB

### 6.4.4 Minimum output power

The minimum controlled output power of the BS is when the power is set to a minimum value.

#### 6.4.4.1 Minimum Requirement

Down link (DL) minimum output power shall be lower than or equal to:

Maximum output power - 30dB

#### 6.4.5 Primary CCPCH power

Primary CCPCH power is the code domain power of the primary common control physical channel averaged over the transmit timeslot. Primary CCPCH power is signalled over the BCH.

The error between the BCH-broadcast value of the Primary CCPCH power and the Primary CCPCH power averaged over the timeslot shall not exceed the values in table 6.2. The error is a function of the output power averaged over the timeslot, Pout, and the manufacturer's rated output power, PRAT.

**Table 6.2: Errors between Primary CCPCH power and the broadcast value**

| Output power in slot, dB | PCCPCH power tolerance |
|--------------------------|------------------------|
| PRAT-3 < Pout ≤ PRAT+2   | +/- 2.5 dB             |
| PRAT-6 < Pout ≤ PRAT-3   | +/- 3.5 dB             |
| PRAT-13 < Pout ≤ PRAT-6  | +/- 5 dB               |

#### 6.4.6 Differential accuracy of Primary CCPCH power

The differential accuracy of the Primary CCPCH power is the relative transmitted power accuracy of PCCPCH in consecutive frames when the nominal PCCPCH power is not changed.

#### 6.4.6.1 Minimum Requirement for Differential accuracy of PCCPCH power

Differential accuracy of PCCPCH power: +/- 0.5 dB

### 6.5 Transmit ON/OFF power

For the case of MBSFN-only operation, this subclause shall not be applicable.

#### 6.5.1 Transmit OFF power

Transmit OFF power is defined as the RRC filtered mean power measured over one chip when the transmitter is off. The transmit OFF power state is when the BS does not transmit.

##### 6.5.1.1 Minimum Requirement

###### 6.5.1.1.1 3,84 Mcps TDD Option

The transmit OFF power shall be less than -79 dBm.

###### 6.5.1.1.2 1,28 Mcps TDD Option

The requirement of transmit OFF power shall be less than -82 dBm.

###### 6.5.1.1.3 7,68 Mcps TDD Option

The transmit OFF power shall be less than -76 dBm.

## 6.5.2 Transmit ON/OFF Time mask

The time mask transmit ON/OFF defines the ramping time allowed for the BS between transmit OFF power and transmit ON power.

### 6.5.2.1 Minimum Requirement

#### 6.5.2.1.1 3,84 Mcps TDD Option

The transmit power level versus time should meet the mask specified in figure 6.1.

**Figure 6.1: Transmit ON/OFF template**

#### 6.5.2.1.2 1,28 Mcps TDD Option

The transmit power level versus time should meet the mask specified in figure 6.1A.

**Figure 6.1A: Transmit ON/OFF template**

#### 6.5.2.1.3 7,68 Mcps TDD Option

The transmit power level versus time should meet the mask specified in figure 6.1B.

**Figure 6.1B: Transmit ON/OFF template**

## 6.6 Output RF spectrum emissions

### 6.6.1 Occupied bandwidth

#### 6.6.1.1 3,84 Mcps TDD Option

Occupied bandwidth is a measure of the bandwidth containing 99% of the total integrated power for transmitted spectrum and is centered on the assigned channel frequency. The occupied channel bandwidth is less than 5 MHz based on a chip rate of 3.84 Mcps.

#### 6.6.1.2 1,28 Mcps TDD Option

Occupied bandwidth is a measure of the bandwidth containing 99% of the total integrated power for transmitted spectrum and is centered on the assigned channel frequency. The occupied channel bandwidth is about 1.6 MHz based on a chip rate of 1.28 Mcps.

#### 6.6.1.3 7,68 Mcps TDD Option

Occupied bandwidth is a measure of the bandwidth containing 99% of the total integrated power for transmitted spectrum and is centered on the assigned channel frequency. The occupied channel bandwidth is less than 10 MHz based on a chip rate of 7.68 Mcps.

### 6.6.2 Out of band emission

Out of band emissions are unwanted emissions immediately outside the channel bandwidth resulting from the modulation process and non-linearity in the transmitter but excluding spurious emissions. This out of band emission requirement is specified both in terms of a spectrum emission mask and adjacent channel power ratio for the transmitter.

#### 6.6.2.1 Spectrum emission mask

##### 6.6.2.1.1 3,84 Mcps TDD Option

The mask defined in Table 6.3 to 6.6 below may be mandatory in certain regions. In other regions this mask may not be applied.

For regions where this clause applies, the requirement shall be met by a base station transmitting on a single RF carrier configured in accordance with the manufacturer's specification. Emissions shall not exceed the maximum level specified in tables 6.3 to 6.6 for the appropriate BS maximum output power, in the frequency range from  $\Delta f = 2.5$  MHz to  $\Delta f_{max}$  from the carrier frequency, where:

- $\Delta f$  is the separation between the carrier frequency and the nominal -3dB point of the measuring filter closest to the carrier frequency.
- $f_{\text{offset}}$  is the separation between the carrier frequency and the center frequency of the measuring filter.  $f_{\text{offset}_{\text{max}}}$  is either 12.5 MHz or the offset to the UMTS Tx band edge as defined in section 5.2, whichever is the greater.
- $\Delta f_{\text{max}}$  is equal to  $f_{\text{offset}_{\text{max}}}$  minus half of the bandwidth of the measurement filter.

Figure 6.2

Table 6.3: Spectrum emission mask values, BS maximum output power  $P \geq 43 \text{ dBm}$ 

| Frequency offset of measurement filter - 3dB point, $\Delta f$ | Frequency offset of measurement filter centre frequency, $f_{\text{offset}}$ | Maximum level   | Measurement bandwidth |
|--|--|---|-----------------------|
| 2.5 MHz $\leq \Delta f < 2.7$ MHz                              | 2.515MHz $\leq f_{\text{offset}} <$ 2.715MHz                                 | -14 dBm   | 30 kHz                |
| 2.7 MHz $\leq \Delta f < 3.5$ MHz                              | 2.715MHz $\leq f_{\text{offset}} <$ 3.515MHz                                 | $-14 \text{ dBm} - 15 \cdot \left( \frac{f_{\text{offset}}}{\text{MHz}} - 2.715 \right) \text{ dB}$ | 30 kHz                |
| (see note)   | 3.515MHz $\leq f_{\text{offset}} <$ 4.0MHz                                   | -26 dBm   | 30 kHz                |

NOTE: This frequency range ensures that the range of values of  $f_{\text{offset}}$  is continuous.

#### 6.6.2.1.2 1,28 Mcps TDD Option

The mask defined in Table 6.3A to 6.6A may be mandatory in certain regions. In other regions this mask may not be applied.

For regions where this clause applies, the requirement shall be met by a base station transmitting on a single RF carrier configured in accordance with the manufacturer's specification. Emissions shall not exceed the maximum level specified in table 6.3A to 6.6A for the appropriate BS maximum output power, in the frequency range from  $\Delta f = 0.8$  MHz to  $\Delta f_{\text{max}}$  from the carrier frequency, where:

- $\Delta f$  is the separation between the carrier frequency and the nominal -3dB point of the measuring filter closest to the carrier frequency.
- $f_{\text{offset}}$  is the separation between the carrier frequency and the center frequency of the measuring filter.  $f_{\text{offset}_{\text{max}}}$  is either 4 MHz or the offset to the UMTS Tx band edge as defined in section 5.2, whichever is the greater.
- $\Delta f_{\text{max}}$  is equal to  $f_{\text{offset}_{\text{max}}}$  minus half of the bandwidth of the measurement filter.

Figure 6.2A

NOTE: This frequency range ensures that the range of values of  $f_{\text{offset}}$  is continuous.

#### 6.6.2.1.3 7,68 Mcps TDD Option

The mask defined in Table 6.3B to 6.6B below may be mandatory in certain regions. In other regions this mask may not be applied.

For regions where this clause applies, the requirement shall be met by a base station transmitting on a single RF carrier configured in accordance with the manufacturer's specification. Emissions shall not exceed the maximum level specified in tables 6.3B to 6.6B for the appropriate BS maximum output power, in the frequency range from  $\Delta f = 5$  MHz to  $\Delta f_{\text{max}}$  from the carrier frequency, where:

- $\Delta f$  is the separation between the carrier frequency and the nominal -3dB point of the measuring filter closest to the carrier frequency.
- $f_{\text{offset}}$  is the separation between the carrier frequency and the center frequency of the measuring filter..  
 $f_{\text{offset}_{\text{max}}}$  is either 25 MHz or the offset to the UMTS Tx band edge as defined in section 5.2, whichever is the greater.
- $\Delta f_{\text{max}}$  is equal to  $f_{\text{offset}_{\text{max}}}$  minus half of the bandwidth of the measurement filter.

| 15 MHz $\leq \Delta f \leq \Delta f_{\text{max}}$             | 15.5MHz $\leq f_{\text{offset}} <$ $f_{\text{offset}_{\text{max}}}$          | -28 dBm  | 1 MHz                 |

NOTE: This frequency range ensures that the range of values of  $f_{\text{offset}}$  is continuous.

### 6.6.2.2 Adjacent Channel Leakage power Ratio (ACLR)

Adjacent Channel Leakage power Ratio (ACLR) is the ratio of the RRC filtered mean power centered on the assigned channel frequency to the RRC filtered mean power centered on an adjacent channel frequency. The requirements shall apply for all configurations of BS (single carrier or multi-carrier), and for all operating modes foreseen by the manufacturer's specification.

In some cases the requirement is expressed as adjacent channel leakage power, which is the RRC filtered mean power for the given bandwidth of the victim system at the defined adjacent channel offset.

The requirement depends on the deployment scenario. Three different deployment scenarios have been defined as given below.

#### 6.6.2.2.1 Minimum Requirement

##### 6.6.2.2.1.1 3,84 Mcps TDD Option

The ACLR of a single carrier BS or a multi-carrier BS with contiguous carrier frequencies shall be higher than the value specified in Table 6.7.

**Table 6.7: BS ACLR**

| BS adjacent channel offset below the first or above the last carrier frequency used | ACLR limit |
|---|------------|
| 5 MHz   | 45 dB      |
| 10 MHz  | 55 dB      |

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied individually to the single carriers or group of single carriers.

#### 6.6.2.2.1.2 1,28 Mcps TDD Option

For the 1.28Mcps chip rate option, the ACLR of a single carrier BS or a multi-carrier BS with contiguous carrier frequencies shall be better than the value specified in Table 6.7A

**Table 6.7A: BS ACLR (1.28Mcps chip rate)**

| BS adjacent channel offset below the first or above the last carrier frequency used | ACLR limit |
|---|------------|
| 1.6 MHz   | 40 dB      |
| 3.2 MHz   | 45 dB      |

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied individually to the single carriers or group of single carriers.

#### 6.6.2.2.1.3 7,68 Mcps TDD Option

The ACLR of a single carrier BS or a multi-carrier BS with contiguous carrier frequencies shall be higher than the value specified in Table 6.7B.

**Table 6.7B: BS ACLR**

| BS adjacent channel offset below the first or above the last carrier frequency used | Chip Rate for RRC Measurement Filter | ACLR limit |
|---|--------------------------------------|------------|
| 7.5 MHz   | 3.84 Mcps                            | 45 dB      |
| 12.5 MHz  | 3.84 Mcps                            | 55 dB      |
| 10.0 MHz  | 7.68 Mcps                            | 45 dB      |
| 20.0 MHz  | 7.68 Mcps                            | 55 dB      |

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied individually to the single carriers or group of single carriers.

#### 6.6.2.2.2 Additional requirement for operation in the same geographic area with FDD or unsynchronised TDD on adjacent channels

This requirement shall apply in the case that the equipment is operated in the same geographical area with either an FDD or unsynchronised TDD BS that comprises uplink receive functionality on adjacent channels.

##### 6.6.2.2.2.1 3,84 Mcps TDD Option

##### 6.6.2.2.2.1.1 Additional requirement for operation in the same geographic area with unsynchronised TDD on adjacent channels

In case the equipment is operated in the same geographic area with an unsynchronised TDD BS operating on the first or second adjacent frequency, the adjacent channel leakage power of a single carrier BS or a multi-carrier BS with contiguous carrier frequencies shall not exceed the limits specified in Table 6.8.

**Table 6.8: Adjacent channel leakage power limits for operation in the same geographic area with unsynchronised TDD on adjacent channels**

| BS Class      | BS adjacent channel offset below the first or above the last carrier frequency used | Maximum Level | Measurement Bandwidth |
|---------------|---|---------------|-----------------------|
| Wide Area BS  | 5 MHz   | - 29 dBm      | 3,84 MHz              |
| Wide Area BS  | 10 MHz  | - 29 dBm      | 3,84 MHz              |
| Local Area BS | 5 MHz   | -16 dBm       | 3,84 MHz              |
| Local Area BS | 10 MHz  | -26 dBm       | 3,84 MHz              |

NOTE: The requirement in Table 6.8 for the Wide Area BS are based on a coupling loss of 74 dB between the unsynchronised TDD base stations. The requirement in Table 6.8 for the Local Area BS ACLR1 ( $\pm 5$  MHz channel offset) are based on a coupling loss of 87 dB between unsynchronised Wide Area and Local Area TDD base stations. The requirement in Table 6.8 for the Local Area BS ACLR2 ( $\pm 10$  MHz channel offset) are based on a coupling loss of 77 dB between unsynchronised Wide Area and Local Area TDD base stations. The scenarios leading to these requirements are addressed in TR25.942 [4].

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied to those adjacent channels of the single carriers or group of single channels which are used by the TDD BS in the same geographic area.

**6.6.2.2.1.2 Additional requirement for operation in the same geographic area with FDD on adjacent channels**

In case the equipment is operated in the same geographic area with a FDD BS operating on the first or second adjacent channel, the adjacent channel leakage power shall not exceed the limits specified in Table 6.8AA.

**Table 6.8AA: Adjacent channel leakage power limits for operation in the same geographic area with FDD on adjacent channels**

| BS Class      | BS Adjacent Channel Offset | Maximum Level | Measurement Bandwidth |
|---------------|----------------------------|---------------|-----------------------|
| Wide Area BS  | $\pm 5$ MHz                | -36 dBm       | 3,84 MHz              |
| Wide Area BS  | $\pm 10$ MHz               | -36 dBm       | 3,84 MHz              |
| Local Area BS | $\pm 5$ MHz                | -23 dBm       | 3,84 MHz              |
| Local Area BS | $\pm 10$ MHz               | -33 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.8AA for the Wide Area BS are based on a coupling loss of 74 dB between the FDD and TDD base stations. The requirements in Table 6.8AA for the Local Area BS ACLR1 ( $\pm 5$  MHz channel offset) are based on a relaxed coupling loss of 87 dB between TDD and FDD base stations. The requirement for the Local Area BS ACLR2 ( $\pm 10$  MHz channel offset) are based on a relaxed coupling loss of 77 dB between TDD and FDD base stations. The scenarios leading to these requirements are addressed in TR 25.942 [4].

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied to those adjacent channels of the single carriers or group of single channels which are used by the FDD BS in the same geographic area.

**6.6.2.2.2 1,28 Mcps TDD Option**

**6.6.2.2.2.1 Additional requirement for operation in the same geographic area with unsynchronised TDD on adjacent channels**

In case the equipment is operated in the same geographic area with an unsynchronised TDD BS operating on an adjacent channel, the requirement is specified in terms of adjacent channel leakage power. In geographic areas where only UTRA 1.28 Mcps TDD option is deployed, the adjacent channel leakage power limits shall not exceed the limits specified in Table 6.8A, otherwise the limits in Table 6.8B shall apply.

**Table 6.8A: Adjacent channel leakage limits for operation in the same geographic area with unsynchronised 1.28 Mcps TDD on adjacent channels**

| BS Class      | BS Adjacent Channel Offset | Maximum Level | Measurement Bandwidth |
|---------------|----------------------------|---------------|-----------------------|
| Wide Area BS  | $\pm 1,6$ MHz              | -29 dBm       | 1,28 MHz              |
| Wide Area BS  | $\pm 3,2$ MHz              | -29 dBm       | 1,28 MHz              |
| Local Area BS | $\pm 1,6$ MHz              | -16 dBm       | 1,28 MHz              |
| Local Area BS | $\pm 3,2$ MHz              | -16 dBm       | 1,28 MHz              |

**Table 6.8B: Adjacent Channel leakage power limits for operation in the same geographic area with unsynchronised TDD on adjacent channels**

| BS Class      | BS Adjacent Channel Offset | Maximum Level | Measurement Bandwidth |
|---------------|----------------------------|---------------|-----------------------|
| Wide Area BS  | ± 3,4 MHz                  | -29 dBm       | 3,84 MHz              |
| Local Area BS | ± 3,4 MHz                  | -16 dBm       | 3,84 MHz              |

NOTE: The requirement in Table 6.8A and 6.8B for the Wide Area BS are based on a coupling loss of 74 dB between the unsynchronised TDD base stations. The requirement in Table 6.8A and 6.8B for the Local Area BS are based on a coupling loss of 87 dB between unsynchronised Wide Area and Local Area TDD base stations. The scenarios leading to these requirements are addressed in TR25.942 [4].

**6.6.2.2.2.2.2** Additional requirement for operation in the same geographic area with FDD on adjacent channels

In case the equipment is operated in the same geographic area with a FDD BS operating on an adjacent channel, the adjacent channel leakage power shall not exceed the limits specified in Table 6.8C. This requirement is only applicable if the equipment is intended to operate in frequency bands specified in 5.2 a) and the highest carrier frequency used is in the range 1916,2 - 1920 MHz.

**Table 6.8C: Adjacent channel leakage power limits for BS in band a) when operating in the same geographic area with FDD on adjacent channels**

| BS Class      | Center Frequency for Measurement | Maximum Level | Measurement Bandwidth |
|---------------|----------------------------------|---------------|-----------------------|
| Wide Area BS  | 1922,6 MHz                       | -36 dBm       | 3,84 MHz              |
| Local Area BS | 1922,6 MHz                       | -23 dBm       | 3,84 MHz              |

NOTE: The requirement in Table 6.8C for Wide Area BS is based on a relaxed coupling loss of 74 dB between the TDD and FDD base stations. The requirement in Table 6.8C for Local Area BS is based on a relaxed coupling loss of 87 dB between TDD and FDD base stations. The scenarios leading to these requirements are addressed in TR 25.942 [4].

**6.6.2.2.3.3** 7,68 Mcps TDD Option

**6.6.2.2.3.1** Additional requirement for operation in the same geographic area with unsynchronised TDD on adjacent channels

In case the equipment is operated in the same geographic area with an unsynchronised TDD BS operating on the first or second adjacent frequency, the adjacent channel leakage power of a single carrier BS or a multi-carrier BS with contiguous carrier frequencies shall not exceed the limits specified in Table 6.8D and 6.8E.

**Table 6.8D: Adjacent channel leakage power limits for operation in the same geographic area with unsynchronised TDD (7,68 Mcps TDD and 3,84 Mcps TDD) on adjacent channels**

| BS Class      | BS adjacent channel offset below the first or above the last carrier frequency used | Maximum Level | Measurement Bandwidth |
|---------------|---|---------------|-----------------------|
| Wide Area BS  | 7.5 MHz   | - 29 dBm      | 3,84 MHz              |
| Wide Area BS  | 12.5 MHz  | - 29 dBm      | 3,84 MHz              |
| Wide Area BS  | 17.5 MHz  | - 29 dBm      | 3,84 MHz              |
| Wide Area BS  | 22.5 MHz  | - 29 dBm      | 3,84 MHz              |
| Local Area BS | 7.5 MHz   | -16 dBm       | 3,84 MHz              |
| Local Area BS | 12.5 MHz  | -26 dBm       | 3,84 MHz              |
| Local Area BS | 17.5 MHz  | -26 dBm       | 3,84 MHz              |
| Local Area BS | 22.5 MHz  | -26 dBm       | 3,84 MHz              |

**Table 6.8E: Adjacent channel leakage power limits for operation in the same geographic area with unsynchronised 1.28 Mcps TDD on adjacent channels**

| BS Class      | BS adjacent channel offset below the first or above the last carrier frequency used | Maximum Level | Measurement Bandwidth |
|---------------|---|---------------|-----------------------|
| Wide Area BS  | 5.8 MHz   | - 29 dBm      | 1.28 MHz              |
| Wide Area BS  | 7.4 MHz   | - 29 dBm      | 1.28 MHz              |
| Local Area BS | 5.8 MHz   | - 16 dBm      | 1.28 MHz              |
| Local Area BS | 7.4 MHz   | - 16 dBm      | 1.28 MHz              |

NOTE: The requirements in Table 6.8D and 6.8E for the Wide Area BS are based on a coupling loss of 74 dB between the unsynchronised TDD base stations. The requirement in Table 6.8D and 6.8E for the Local Area BS ACLR1 are based on a coupling loss of 87 dB between unsynchronised Wide Area and Local Area TDD base stations. The requirement in Table 6.8D and 6.8E for the Local Area BS ACLR2 are based on a coupling loss of 77 dB and 87 dB between unsynchronised Wide Area and Local Area 3.84 Mcps TDD and 1.28 Mcps TDD base stations respectively.

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied to those adjacent channels of the single carriers or group of single channels which are used by the TDD BS in the same geographic area.

#### 6.6.2.2.3.2 Additional requirement for operation in the same geographic area with FDD on adjacent channels

In case the equipment is operated in the same geographic area with a FDD BS operating on the first or second adjacent channel, the adjacent channel leakage power shall not exceed the limits specified in Table 6.8F.

**Table 6.8F: Adjacent channel leakage power limits for operation in the same geographic area with FDD on adjacent channels**

| BS Class      | BS Adjacent Channel Offset | Maximum Level | Measurement Bandwidth |
|---------------|----------------------------|---------------|-----------------------|
| Wide Area BS  | $\pm 7.5$ MHz              | -36 dBm       | 3,84 MHz              |
| Wide Area BS  | $\pm 12.5$ MHz             | -36 dBm       | 3,84 MHz              |
| Wide Area BS  | $\pm 17.5$ MHz             | -39 dBm       | 3,84 MHz              |
| Wide Area BS  | $\pm 22.5$ MHz             | -43 dBm       | 3,84 MHz              |
| Local Area BS | $\pm 7.5$ MHz              | -23 dBm       | 3,84 MHz              |
| Local Area BS | $\pm 12.5$ MHz             | -33 dBm       | 3,84 MHz              |
| Local Area BS | $\pm 17.5$ MHz             | -36 dBm       | 3,84 MHz              |
| Local Area BS | $\pm 22.5$ MHz             | -40 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.8F for the Wide Area BS are based on a coupling loss of 74 dB between the FDD and TDD base stations. The requirements in Table 6.8F for the Local Area BS ACLR1 ( $\pm 10$  MHz channel offset) are based on a relaxed coupling loss of 87 dB between TDD and FDD base stations. The requirements for the Local Area BS ACLR2 ( $\pm 20$  MHz channel offset) are based on a relaxed coupling loss of 77 dB between TDD and FDD base stations.

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied to those adjacent channels of the single carriers or group of single channels which are used by the FDD BS in the same geographic area.

#### 6.6.2.2.3 Additional requirement in case of co-siting with unsynchronised TDD BS or FDD BS operating on an adjacent channel

This requirement shall apply in the case that the equipment is operated in the same geographical area with either an FDD or unsynchronised TDD BS that comprises uplink receive functionality on adjacent channels.

6.6.2.2.3.1 3,84 Mcps TDD Option

6.6.2.2.3.1.1 Additional requirement in case of co-siting with unsynchronised TDD BS operating on an adjacent channel

In case the equipment is co-sited to an unsynchronised TDD BS operating on the first or second adjacent frequency, the adjacent channel leakage power of a single carrier BS or a multi-carrier BS with contiguous carrier frequencies shall not exceed the limits specified in Table 6.9.

**Table 6.9: Adjacent channel leakage power limits in case of co-siting with unsynchronised TDD on adjacent channel**

| BS Class      | BS adjacent channel offset below the first or above the last carrier frequency used | Maximum Level | Measurement Bandwidth |
|---------------|---|---------------|-----------------------|
| Wide Area BS  | 5 MHz   | -73 dBm       | 3.84 MHz              |
| Wide Area BS  | 10 MHz  | -73 dBm       | 3.84 MHz              |
| Local Area BS | 5 MHz   | -46 dBm       | 3.84 MHz              |
| Local Area BS | 10 MHz  | -46 dBm       | 3.84 MHz              |

NOTE: The requirements in Table 6.9 for the Wide Area BS are based on a minimum coupling loss of 30 dB between unsynchronised TDD base stations. The requirements in Table 6.9 for the Local Area BS are based on a minimum coupling loss of 30 dB between unsynchronised Local Area base stations. The co-location of different base station classes is not considered.

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied to those adjacent channels of the single carriers or group of single channels which are used by the co-sited TDD BS.

6.6.2.2.3.1.2 Additional requirement in case of co-siting with FDD BS operating on an adjacent channel

In case the equipment is co-sited to a FDD BS operating on the first or second adjacent channel, the adjacent channel leakage power shall not exceed the limits specified in Table 6.9AA.

**Table 6.9AA: Adjacent channel leakage power limits in case of co-siting with FDD on an adjacent channel**

| BS Class     | BS Adjacent Channel Offset | Maximum Level | Measurement Bandwidth |
|--------------|----------------------------|---------------|-----------------------|
| Wide Area BS | $\pm 5$ MHz                | -80 dBm       | 3,84 MHz              |
| Wide Area BS | $\pm 10$ MHz               | -80 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.9AA are based on a minimum coupling loss of 30 dB between base stations. The co-location of different base station classes is not considered. A co-location requirement for the Local Area TDD BS is intended to be part of a later release.

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied to those adjacent channels of the single carriers or group of single channels which are used by the co-sited FDD BS.

6.6.2.2.3.2 1,28 Mcps TDD Option

6.6.2.2.3.2.1 Additional requirement in case of co-siting with unsynchronised TDD BS operating on an adjacent channel

In case the equipment is co-sited to an unsynchronised TDD BS operating on an adjacent frequency band, the requirement is specified in terms of adjacent channel leakage power. In geographic areas where only UTRA 1.28 Mcps TDD option is deployed, the adjacent channel leakage power shall not exceed the limits specified in Table 6.9A, otherwise the limits in Table 6.9B shall apply.

**Table 6.9A: Adjacent channel leakage power limits in case of co-siting with unsynchronised 1.28 Mcps TDD on an adjacent channel**

| BS Class      | BS Adjacent Channel Offset | Maximum Level | Measurement Bandwidth |
|---------------|----------------------------|---------------|-----------------------|
| Wide Area BS  | ± 1,6 MHz                  | -73 dBm       | 1,28 MHz              |
| Wide Area BS  | ± 3,2 MHz                  | -73 dBm       | 1,28 MHz              |
| Local Area BS | ± 1,6 MHz                  | -49 dBm       | 1,28 MHz              |
| Local Area BS | ± 3,2 MHz                  | -49 dBm       | 1,28 MHz              |

**Table 6.9B: Adjacent Channel leakage power limits for operation in the same geographic area with unsynchronised TDD on an adjacent channel**

| BS Class      | BS Adjacent Channel Offset | Maximum Level | Measurement Bandwidth |
|---------------|----------------------------|---------------|-----------------------|
| Wide Area BS  | ± 3,4 MHz                  | -73 dBm       | 3,84 MHz              |
| Local Area BS | ± 3,4 MHz                  | -46 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.9A and 6.9B for the Wide Area BS are based on a minimum coupling loss of 30 dB between unsynchronised TDD base stations. The requirements in Table 6.9A and 6.9B for the Local Area BS are based on a minimum coupling loss of 30 dB between unsynchronised Local Area base stations. The co-location of different base station classes is not considered.

#### 6.6.2.2.3.2.2 Additional requirement in case of co-siting with FDD BS operating on an adjacent channel

In case the equipment is co-sited to a FDD BS operating on an adjacent channel, the adjacent channel leakage power shall not exceed the limits specified in Table 6.9C. This requirement is only applicable if the equipment is intended to operate in frequency bands specified in 5.2 a) and the highest carrier frequency used is in the range 1916,2 - 1920 MHz.

**Table 6.9C: Adjacent channel leakage power for BS in band a) when co-siting with UTRA FDD on an adjacent channel**

| BS Class     | Center Frequency for Measurement | Maximum Level | Measurement Bandwidth |
|--------------|----------------------------------|---------------|-----------------------|
| Wide Area BS | 1922,6 MHz                       | -80 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.9C are based on a minimum coupling loss of 30 dB between base stations. The co-location of different base station classes is not considered. A co-location requirement for the Local Area TDD BS is intended to be part of a later release.

#### 6.6.2.2.3.3 7,68 Mcps TDD Option

##### 6.6.2.2.3.3.1 Additional requirement in case of co-siting with unsynchronised TDD BS operating on an adjacent channel

In case the equipment is co-sited to an unsynchronised TDD BS operating on the first or second adjacent frequency, the adjacent channel leakage power of a single carrier BS or a multi-carrier BS with contiguous carrier frequencies shall not exceed the limits specified in Table 6.9D and 6.9E.

**Table 6.9D: Adjacent channel leakage power limits in case of co-siting with unsynchronised TDD (7.68 Mcps TDD and 3.84 Mcps TDD) on adjacent channel**

| BS Class      | BS adjacent channel offset below the first or above the last carrier frequency used | Maximum Level | Measurement Bandwidth |
|---------------|---|---------------|-----------------------|
| Wide Area BS  | 7.5 MHz   | -73 dBm       | 3.84 MHz              |
| Wide Area BS  | 12.5 MHz  | -73 dBm       | 3.84 MHz              |
| Wide Area BS  | 17.5 MHz  | -73 dBm       | 3.84 MHz              |
| Wide Area BS  | 22.5 MHz  | -73 dBm       | 3.84 MHz              |
| Local Area BS | 7.5 MHz   | -46 dBm       | 3.84 MHz              |
| Local Area BS | 12.5 MHz  | -46 dBm       | 3.84 MHz              |
| Local Area BS | 17.5 MHz  | -46 dBm       | 3.84 MHz              |
| Local Area BS | 22.5 MHz  | -46 dBm       | 3.84 MHz              |

**Table 6.9E: Adjacent channel leakage power limits in case of co-siting with unsynchronised 1.28 Mcps TDD on adjacent channel**

| BS Class      | BS adjacent channel offset below the first or above the last carrier frequency used | Maximum Level | Measurement Bandwidth |
|---------------|---|---------------|-----------------------|
| Wide Area BS  | 5.8 MHz   | -73 dBm       | 1.28 MHz              |
| Wide Area BS  | 7.4 MHz   | -73 dBm       | 1.28 MHz              |
| Local Area BS | 5.8 MHz   | -49 dBm       | 1.28 MHz              |
| Local Area BS | 7.4 MHz   | -49 dBm       | 1.28 MHz              |

NOTE: The requirements in Table 6.9D and 6.9E for the Wide Area BS are based on a minimum coupling loss of 30 dB between unsynchronised TDD base stations. The requirements in Table 6.9D and 6.9E for the Local Area BS are based on a minimum coupling loss of 30 dB between unsynchronised Local Area base stations. The co-location of different base station classes is not considered.

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied to those adjacent channels of the single carriers or group of single channels which are used by the co-sited TDD BS.

#### 6.6.2.2.3.3.2 Additional requirement in case of co-siting with FDD BS operating on an adjacent channel

In case the equipment is co-sited to a FDD BS operating on the first or second adjacent channel, the adjacent channel leakage power shall not exceed the limits specified in Table 6.9F.

**Table 6.9F: Adjacent channel leakage power limits in case of co-siting with FDD on an adjacent channel**

| BS Class     | BS Adjacent Channel Offset | Maximum Level | Measurement Bandwidth |
|--------------|----------------------------|---------------|-----------------------|
| Wide Area BS | ± 7.5 MHz                  | -80 dBm       | 3,84 MHz              |
| Wide Area BS | ± 12.5 MHz                 | -80 dBm       | 3,84 MHz              |
| Wide Area BS | ± 17.5 MHz                 | -80 dBm       | 3,84 MHz              |
| Wide Area BS | ± 22.5 MHz                 | -80 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.9F are based on a minimum coupling loss of 30 dB between base stations. The co-location of different base station classes is not considered. A co-location requirement for the Local Area TDD BS is intended to be part of a later release.

If a BS provides multiple non-contiguous single carriers or multiple non-contiguous groups of contiguous single carriers, the above requirements shall be applied to those adjacent channels of the single carriers or group of single channels which are used by the co-sited FDD BS.

### 6.6.3 Spurious emissions

Spurious emissions are emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emission, intermodulation products and frequency conversion products, but exclude out of band emissions. This is measured at the base station RF output port.

The requirements shall apply whatever the type of transmitter considered (single carrier or multi carrier). It applies for all transmission modes foreseen by the manufacturer's.

For 3.84 Mcps TDD option, either requirement (except 6.6.3.6) applies at frequencies within the specified frequency ranges which are more than 12.5 MHz under the first carrier frequency used or more than 12.5 MHz above the last carrier frequency used.

For 1.28 Mcps TDD option, either requirement applies at frequencies within the specified frequency ranges which are more than 4 MHz under the first carrier frequency used or more than 4 MHz above the last carrier frequency used.

For 7.68 Mcps TDD option, either requirement (except 6.6.3.6) applies at frequencies within the specified frequency ranges which are more than 25 MHz under the first carrier frequency used or more than 25 MHz above the last carrier frequency used.

Unless otherwise stated, all requirements are measured as mean power.

#### 6.6.3.1 Mandatory Requirements

The requirements of either subclause 6.6.3.1.1 or subclause 6.6.3.1.2 shall apply.

##### 6.6.3.1.1 Spurious emissions (Category A)

The following requirements shall be met in cases where Category A limits for spurious emissions, as defined in ITU-R Recommendation SM.329-9 [1], are applied.

###### 6.6.3.1.1.1 Minimum Requirement

###### 6.6.3.1.1.1.1 3,84 Mcps TDD Option

The power of any spurious emission shall not exceed:

**Table 6.10: BS Mandatory spurious emissions limits, Category A**

| Band   | Minimum requirement | Measurement Bandwidth | Notes  |  |
|--|---------------------|-----------------------|--------|--|
| 9kHz - 150kHz  | -13 dBm             | 1 kHz                 | Note 1 |  |
| 150kHz - 30MHz   |                     | 10 kHz                | Note 1 |  |
| 30MHz - 1GHz   |                     | 100 kHz               | Note 1 |  |
| 1GHz - 12.75 GHz   |                     | 1 MHz                 | Note 2 |  |
| NOTE 1: Bandwidth as in ITU SM.329 [1], s4.1               |                     |                       |        |  |
| NOTE 2: Upper frequency as in ITU SM.329 [1], s2.5 table 1 |                     |                       |        |  |

###### 6.6.3.1.1.1.2 1,28 Mcps TDD Option

The power of any spurious emission shall not exceed:

**Table 6.10A: BS Mandatory spurious emissions limits, Category A**

| Band   | Minimum requirement | Measurement Bandwidth | Notes  |  |
|--|---------------------|-----------------------|--------|--|
| 9kHz - 150kHz  | -13 dBm             | 1 kHz                 | Note 1 |  |
| 150kHz - 30MHz   |                     | 10 kHz                | Note 1 |  |
| 30MHz - 1GHz   |                     | 100 kHz               | Note 1 |  |
| 1GHz - 12.75 GHz   |                     | 1 MHz                 | Note 2 |  |
| NOTE 1: Bandwidth as in ITU SM.329 [1], s4.1               |                     |                       |        |  |
| NOTE 2: Upper frequency as in ITU SM.329 [1], s2.5 table 1 |                     |                       |        |  |

NOTE: only the measurement bands are different according to the occupied bandwidth.

#### 6.6.3.1.1.3 7,68 Mcps TDD Option

The power of any spurious emission shall not exceed:

**Table 6.10B: BS Mandatory spurious emissions limits, Category A**

| Band   | Minimum requirement | Measurement Bandwidth | Notes  |  |
|--|---------------------|-----------------------|--------|--|
| 9kHz - 150kHz  | -13 dBm             | 1 kHz                 | Note 1 |  |
| 150kHz - 30MHz   |                     | 10 kHz                | Note 1 |  |
| 30MHz - 1GHz   |                     | 100 kHz               | Note 1 |  |
| 1GHz - 12.75 GHz   |                     | 1 MHz                 | Note 2 |  |
| NOTE 1: Bandwidth as in ITU SM.329 [1], s4.1               |                     |                       |        |  |
| NOTE 2: Upper frequency as in ITU SM.329 [1], s2.5 table 1 |                     |                       |        |  |

#### 6.6.3.1.2 Spurious emissions (Category B)

The following requirements shall be met in cases where Category B limits for spurious emissions, as defined in ITU-R Recommendation SM.329 [1], are applied.

#### 6.6.3.1.2.1 Minimum Requirement

#### 6.6.3.1.2.1.1 3,84 Mcps TDD Option

The power of any spurious emission shall not exceed:

**Table 6.11: BS Mandatory spurious emissions limits, Category B**

| Band   | Maximum Level | Measurement Bandwidth | Notes  |
|--|---------------|-----------------------|--------|
| 9kHz - 150kHz  | -36 dBm       | 1 kHz                 | Note 1 |
| 150kHz - 30MHz   | -36 dBm       | 10 kHz                | Note 1 |
| 30MHz - 1GHz   | -36 dBm       | 100 kHz               | Note 1 |
| 1GHz ↔ Fl -10 MHz  | -30 dBm       | 1 MHz                 | Note 1 |
| Fl -10MHz ↔ Fu +10 MHz   | -15 dBm       | 1 MHz                 | Note 2 |
| Fu + 10 MHz<br>↔<br>12,75 GHz  | -30 dBm       | 1 MHz                 | Note 3 |
| NOTE 1: Bandwidth as in ITU SM.329 [1], s4.1   |               |                       |        |
| NOTE 2: Limit based on ITU-R SM.329 [1], s4.3 and Annex 7  |               |                       |        |
| NOTE 3: Bandwidth as in ITU-R SM.329 [1], s4.3 and Annex 7. Upper frequency as in ITU-R SM.329 [1], s2.5 table 1 |               |                       |        |

Fl : Lower frequency of the band in which TDD operates  
Fu: Upper frequency of the band in which TDD operates

## 6.6.3.1.2.1.2 1,28 Mcps TDD Option

The power of any spurious emission shall not exceed:

**Table 6.11A: BS Mandatory spurious emissions limits, Category B**

| Band                         | Maximum Level | Measurement Bandwidth | Notes  |
|------------------------------|---------------|-----------------------|--------|
| 9kHz - 150kHz                | -36 dBm       | 1 kHz                 | Note 1 |
| 150kHz - 30MHz               | -36 dBm       | 10 kHz                | Note 1 |
| 30MHz - 1GHz                 | -36 dBm       | 100 kHz               | Note 1 |
| 1GHz<br>↔<br>Fl -10 MHz      | -30 dBm       | 1 MHz                 | Note 1 |
| Fl -10MHz<br>↔<br>Fu +10 MHz | -15 dBm       | 1 MHz                 | Note 2 |
| Fu +10 MHz<br>↔<br>12,5 GHz  | -30 dBm       | 1 MHz                 | Note 3 |

NOTE 1: Bandwidth as in ITU SM.329 [1], s4.1  
 NOTE 2: Limit based on ITU-R SM.329 [1], s4.3 and Annex 7  
 NOTE 3: Bandwidth as in ITU-R SM.329 [1], s4.3 and Annex 7. Upper frequency as in ITU-R SM.329 [1], s2.5 table 1

Fl: Lower frequency of the band in which TDD operates  
 Fu: Upper frequency of the band in which TDD operates

## 6.6.3.1.2.1.3 7,68 Mcps TDD Option

The power of any spurious emission shall not exceed:

**Table 6.11B: BS Mandatory spurious emissions limits, Category B**

| Band                          | Maximum Level | Measurement Bandwidth | Notes  |
|-------------------------------|---------------|-----------------------|--------|
| 9kHz - 150kHz                 | -36 dBm       | 1 kHz                 | Note 1 |
| 150kHz - 30MHz                | -36 dBm       | 10 kHz                | Note 1 |
| 30MHz - 1GHz                  | -36 dBm       | 100 kHz               | Note 1 |

 Fu: Upper frequency of the band in which TDD operates

### 6.6.3.2 Co-existence with GSM 900

#### 6.6.3.2.1 Operation in the same geographic area

This requirement may be applied for the protection of GSM 900 MS and GSM 900 BTS receivers in geographic areas in which both GSM 900 and UTRA are deployed.

##### 6.6.3.2.1.1 Minimum Requirement

The power of any spurious emission shall not exceed:

**Table 6.12: BS Spurious emissions limits for BS in geographic coverage area of GSM 900 MS and GSM 900 BTS receiver**

| Band          | Maximum Level | Measurement Bandwidth | Note |
|---------------|---------------|-----------------------|------|
| 876 - 915 MHz | -61 dBm       | 100 kHz               |      |
| 921 - 960MHz  | -57 dBm       | 100 kHz               |      |

### 6.6.3.2.2 Co-located base stations

This requirement may be applied for the protection of GSM 900 BTS receivers when GSM 900 BTS and UTRA BS are co-located.

##### 6.6.3.2.2.1 Minimum Requirement

The power of any spurious emission shall not exceed:

**Table 6.13: BS Spurious emissions limits for protection of the GSM 900 BTS receiver**

| Band          | Maximum Level | Measurement Bandwidth | Note |
|---------------|---------------|-----------------------|------|
| 876 - 915 MHz | -98 dBm       | 100 kHz               |      |

### 6.6.3.3 Co-existence with DCS 1800

#### 6.6.3.3.1 Operation in the same geographic area

This requirement may be applied for the protection of DCS 1800 MS and DCS 1800 BTS receivers in geographic areas in which both DCS 1800 and UTRA are deployed.

##### 6.6.3.3.1.1 Minimum Requirement

The power of any spurious emission shall not exceed:

**Table 6.14: BS Spurious emissions limits for BS in the band a), d) and e) when operating in geographic coverage area of DCS 1800 MS and DCS 1800 BTS receiver**

| Band            | Maximum Level | Measurement Bandwidth | Note |
|-----------------|---------------|-----------------------|------|
| 1710 - 1785 MHz | -61 dBm       | 100 kHz               |      |
| 1805 - 1880MHz  | -47 dBm       | 100 kHz               |      |

**Table 6.14a: BS Spurious emissions limits for BS in the band f) when operating in geographic coverage area of DCS 1800 MS and DCS 1800 BTS receiver operating in 1710-1755 MHz/1805-1850 MHz**

| Band            | Maximum Level | Measurement Bandwidth | Note |
|-----------------|---------------|-----------------------|------|
| 1710 - 1755 MHz | -61 dBm       | 100 kHz               |      |
| 1805 - 1850 MHz | -47 dBm       | 100 kHz               |      |

### 6.6.3.3.2 Co-located base stations

This requirement may be applied for the protection of DCS 1800 BTS receivers when DCS 1800 BTS and UTRA BS are co-located.

#### 6.6.3.3.2.1 Minimum Requirement

The power of any spurious emission shall not exceed:

**Table 6.15: BS Spurious emissions limits for BS in the band a), d) and e) when co-located with DCS 1800 BTS**

| Band            | Maximum Level | Measurement Bandwidth | Note |
|-----------------|---------------|-----------------------|------|
| 1710 - 1785 MHz | -98 dBm       | 100 kHz               |      |

**Table 6.15: BS Spurious emissions limits for BS in the band f) when co-located with DCS1800 BTS**

| Band            | Maximum Level | Measurement Bandwidth | Note |
|-----------------|---------------|-----------------------|------|
| 1710 - 1755 MHz | -98 dBm       | 100 kHz               |      |

### 6.6.3.4 Co-existence with UTRA-FDD

#### 6.6.3.4.1 Operation in the same geographic area

This requirement may be applied to geographic areas in which both UTRA-TDD and UTRA-FDD operating in bands specified in Table 6.16 are deployed.

##### 6.6.3.4.1.1 Minimum Requirement

For TDD base stations which use carrier frequencies within the band 2010 - 2025 MHz the requirements applies at all frequencies within the specified frequency bands in table 6.16. For 3.84 Mcps TDD option base stations which use a carrier frequency within the band 1900-1920 MHz, the requirement applies at frequencies within the specified frequency range which are more than 12,5 MHz above the last carrier used in the frequency band 1900-1920 MHz. For 1.28 Mcps TDD option base stations which use carrier frequencies within the band 1900-1920 MHz, the requirement applies at frequencies within the specified frequency range which are more than 4 MHz above the last carrier used in the frequency band 1900-1920 MHz. For 7.68 Mcps TDD option base stations which use a carrier frequency within the band 1900-1920 MHz, the requirement applies at frequencies within the specified frequency range which are more than 25 MHz above the last carrier used in the frequency band 1900-1920 MHz.

The power of any spurious emission shall not exceed:

**Table 6.16: BS Spurious emissions limits for BS in geographic coverage area of UTRA-FDD**

| BS Class           | Band   | Maximum Level         | Measurement Bandwidth | Note                |
|--------------------|--|-----------------------|-----------------------|---------------------|
| Wide Area BS       | 1920 - 1980 MHz  | -43 dBm (*)           | 3.84 MHz              |                     |
| Wide Area BS       | 2110 - 2170 MHz  | -52 dBm               | 1 MHz                 |                     |
| Wide Area BS       | 2500 - 2570 MHz  | -43 dBm(**)           | 3.84 MHz              |                     |
| Wide Area BS       | 2620 - 2690 MHz  | -52 dBm               | 1 MHz                 |                     |
| Wide Area BS       | 815-850 MHz  | -43 dBm <sup>†</sup>  | 3.84 MHz              | Applicable in Japan |
| Wide Area BS       | 860-895 MHz  | -52 dBm <sup>†</sup>  | 1 MHz                 | Applicable in Japan |
| Wide Area BS       | 1427.9MHz - 1452.9MHz  | -43 dBm <sup>††</sup> | 3.84 MHz              | Wide Area BS        |
| Wide Area BS       | 1475.9MHz - 1500.9MHz  | -52 dBm <sup>††</sup> | 1 MHz                 | Wide Area BS        |
| Wide Area BS       | 1749.9-1784.9 MHz  | -43 dBm <sup>†</sup>  | 3.84 MHz              | Applicable in Japan |
| Wide Area BS       | 1844.9-1879.9 MHz  | -52 dBm <sup>†</sup>  | 1 MHz                 | Applicable in Japan |
| Local Area BS      | 1920 - 1980 MHz  | -40 dBm (*)           | 3.84 MHz              |                     |
| Local Area BS      | 2110 - 2170 MHz  | -52 dBm               | 1 MHz                 |                     |
| Local Area BS      | 2500 - 2570 MHz  | -40 dBm(**)           | 3.84 MHz              |                     |
| Local Area BS      | 2620 - 2690 MHz  | -52 dBm               | 1 MHz                 |                     |
| NOTE*              | For 3.84 Mcps TDD option base stations which use carrier frequencies within the band 1900 - 1920 MHz, the requirement shall be measured RRC filtered mean power with the lowest centre frequency of measurement at 1922.6 MHz or 15 MHz above the highest TDD carrier used, whichever is higher. For 1.28 Mcps TDD option base stations which use carrier frequencies within the band 1900 - 1920 MHz or 1880-1920MHz, the requirement shall be measured RRC filtered mean power with the lowest centre frequency of measurement at 1922.6 MHz or 6.6 MHz above the highest TDD carrier used, whichever is higher. For 7.68 Mcps TDD option base stations which use carrier frequencies within the band 1900 - 1920 MHz, the requirement shall be measured RRC filtered mean power with the lowest centre frequency of measurement at 1922.6 MHz or 30 MHz above the highest TDD carrier used, whichever is higher.  |                       |                       |                     |
| NOTE **            | For 3.84 Mcps TDD option base stations which use carrier frequencies within the band 2570 - 2620 MHz, the requirement shall be measured RRC filtered mean power with the highest centre frequency of measurement at 2567.5 MHz or 15 MHz below the lowest TDD carrier used, whichever is lower. For 1.28 Mcps TDD option base stations which use carrier frequencies within the band 2570 - 2620 MHz, the requirement shall be measured RRC filtered mean power with the highest centre frequency of measurement at 2567.5 MHz or 6.6 MHz below the lowest TDD carrier used, whichever is lower. For 7.68 Mcps TDD option base stations which use carrier frequencies within the band 2570 - 2620 MHz, the requirement shall be measured RRC filtered mean power with the highest centre frequency of measurement at 2567.5 MHz or 30 MHz below the lowest TDD carrier used, whichever is lower. NOTE <sup>†</sup> This is applicable only in Japan for 3.84 Mcps and 7.68 Mcps TDD options operating in 2010-2025 MHz of band referenced in subclause 5.2(a). |                       |                       |                     |
| NOTE <sup>††</sup> | This is applicable only 7.68 Mcps TDD option operating in 2010-2025 MHz of band referenced in subclause 5.2(a).  |                       |                       |                     |

NOTE: The requirements for Wide Area BS in Table 6.16 are based on a coupling loss of 67dB between the TDD and FDD base stations. The requirements for Local Area BS in Table 6.16 are based on a coupling loss of 70 dB between TDD and FDD Wide Area base stations. The scenarios leading to these requirements are addressed in TR 25.942 [4].

#### 6.6.3.4.2 Co-located base stations

This requirement may be applied for the protection of UTRA-FDD BS receivers when UTRA-TDD BS and UTRA FDD BS are co-located.

##### 6.6.3.4.2.1 Minimum Requirement

For TDD base stations which use carrier frequencies within the band 2010 - 2025 MHz the requirements applies at all frequencies within the specified frequency bands in table 6.17. For 3.84 Mcps TDD option base stations which use a carrier frequency within the band 1900-1920 MHz, the requirement applies at frequencies within the specified frequency range which are more than 12,5 MHz above the last carrier used in the frequency band 1900-1920 MHz. For 1.28 Mcps TDD option base stations which use carrier frequencies within the band 1900-1920 MHz, the requirement applies at frequencies within the specified frequency range which are more than 4 MHz above the last carrier used in the frequency band 1900-1920 MHz. For 7.68 Mcps TDD option base stations which use a carrier frequency within the

band 1900-1920 MHz, the requirement applies at frequencies within the specified frequency range which are more than 25 MHz above the last carrier used in the frequency band 1900-1920 MHz.

The power of any spurious emission shall not exceed:

**Table 6.17: BS Spurious emissions limits for BS co-located with UTRA-FDD**

| BS Class     | Band  | Maximum Level | Measurement Bandwidth |
|--------------|---|---------------|-----------------------|
| Wide Area BS | 1920 - 1980 MHz   | -80 dBm (*)   | 3.84 MHz              |
| Wide Area BS | 2110 - 2170 MHz   | -52 dBm       | 1 MHz                 |
| Wide Area BS | 2500 - 2570 MHz   | - 80 dBm(**)  | 3.84 MHz              |
| Wide Area BS | 2620 - 2690 MHz   | -52 dBm       | 1 MHz                 |
| NOTE *       | For 3.84 Mcps TDD option base stations which use carrier frequencies within the band 1900 - 1920 MHz, the requirement shall be measured RRC filtered mean power with the lowest centre frequency of measurement at 1922.6 MHz or 15 MHz above the highest TDD carrier used, whichever is higher. For 1.28 Mcps TDD option base stations which use carrier frequencies within the band 1900 - 1920 MHz or 1880-1920MHz, the requirement shall be measured RRC filtered mean power with the lowest centre frequency of measurement at 1922.6 MHz or 6.6 MHz above the highest TDD carrier used, whichever is higher. For 7.68 Mcps TDD option base stations which use carrier frequencies within the band 1900 - 1920 MHz, the requirement shall be measured RRC filtered mean power with the lowest centre frequency of measurement at 1922.6 MHz or 30 MHz above the highest TDD carrier used, whichever is higher. |               |                       |
| NOTE **      | For 3.84 Mcps TDD option base stations which use carrier frequencies within the band 2570 - 2620 MHz, the requirement shall be measured RRC filtered mean power with the highest centre frequency of measurement at 2567.5 MHz or 15 MHz below the lowest TDD carrier used, whichever is lower. For 1.28 Mcps TDD option base stations which use carrier frequencies within the band 2570 - 2620 MHz, the requirement shall be measured RRC filtered mean power with the highest centre frequency of measurement at 2567.5 MHz or 6.6MHz below the lowest TDD carrier used, whichever is lower. For 7.68 Mcps TDD option base stations which use carrier frequencies within the band 2570 - 2620 MHz, the requirement shall be measured RRC filtered mean power with the highest centre frequency of measurement at 2567.5 MHz or 30 MHz below the lowest TDD carrier used, whichever is lower.                     |               |                       |

NOTE: The requirements in Table 6.17 are based on a minimum coupling loss of 30 dB between base stations. The co-location of different base station classes is not considered. A co-location requirement for the Local Area TDD BS is intended to be part of a later release.

### 6.6.3.5 Co-existence with unsynchronised TDD

#### 6.6.3.5.1 Operation in the same geographic area

This requirement shall apply in case the equipment is operated in the same geographic area with unsynchronised TDD BS that comprises uplink receive functionality.

##### 6.6.3.5.1.1 Minimum Requirement

###### 6.6.3.5.1.1.1 3,84 Mcps TDD option

The RRC filtered mean power of any spurious emission shall not exceed the limits specified in table 6.18.

**Table 6.18: BS Spurious emissions limits for operation in same geographic area with unsynchronised TDD**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -39 dBm       | 3,84 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -39 dBm       | 3,84 MHz              |
| Wide Area BS  | 2570 - 2620 MHz | -39 dBm       | 3,84 MHz              |
| Local Area BS | 1900 - 1920 MHz | -36 dBm       | 3,84 MHz              |
| Local Area BS | 2010 - 2025 MHz | -36 dBm       | 3,84 MHz              |
| Local Area BS | 2570 - 2620 MHz | -36 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.18 for the Wide Area BS are based on a minimum coupling loss of 67 dB between unsynchronised TDD base stations. The requirements in Table 6.18 for the Local Area BS are based on a coupling loss of 70 dB between unsynchronised Wide Area and Local Area TDD base stations. The scenarios leading to these requirements are addressed in TR25.942 [4].

#### 6.6.3.5.1.1.2 1,28 Mcps TDD option

In geographic areas where only 1,28 Mcps TDD is deployed, the RRC filtered mean power of any spurious emission shall not exceed the limits specified in table 6.19, otherwise the limits in table 6.20 shall apply.

**Table 6.19: BS Spurious emissions limits for operation in same geographic area with unsynchronised 1,28 Mcps TDD**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -39 dBm       | 1,28 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -39 dBm       | 1,28 MHz              |
| Wide Area BS  | 2300 - 2400 MHz | -39 dBm       | 1.28MHz               |
| Wide Area BS  | 2570 - 2620 MHz | -39 dBm       | 1,28 MHz              |
| Wide Area BS  | 1880 - 1920 MHz | -39 dBm       | 1,28 MHz              |
| Local Area BS | 1900 - 1920 MHz | -36 dBm       | 1,28 MHz              |
| Local Area BS | 2300 - 2400 MHz | -36 dBm       | 1.28MHz               |
| Local Area BS | 2010 - 2025 MHz | -36 dBm       | 1,28 MHz              |
| Local Area BS | 2570 - 2620 MHz | -36 dBm       | 1,28 MHz              |
| Local Area BS | 1880 - 1920 MHz | -36 dBm       | 1,28 MHz              |

**Table 6.20: BS Spurious emissions limits for operation in same geographic area with unsynchronised TDD**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -39 dBm       | 3,84 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -39 dBm       | 3,84 MHz              |
| Wide Area BS  | 2570 - 2620 MHz | -39 dBm       | 3,84 MHz              |
| Local Area BS | 1900 - 1920 MHz | -36 dBm       | 3,84 MHz              |
| Local Area BS | 2010 - 2025 MHz | -36 dBm       | 3,84 MHz              |
| Local Area BS | 2570 - 2620 MHz | -36 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.19 and 6.20 for the Wide Area BS are based on a minimum coupling loss of 67 dB between unsynchronised TDD base stations. The requirements in Table 6.19 and 6.20 for the Local Area BS are based on a coupling loss of 70 dB between unsynchronised Wide Area and Local Area TDD base stations. The scenarios leading to these requirements are addressed in TR25.942 [4].

#### 6.6.3.5.1.1.3 7,68 Mcps TDD option

The RRC filtered mean power of any spurious emission shall not exceed the limits specified in table 6.20A and 6.20B.

**Table 6.20A: BS Spurious emissions limits for operation in same geographic area with unsynchronised TDD (7.68 Mcps TDD and 3.84 Mcps TDD)**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -39 dBm       | 3,84 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -39 dBm       | 3,84 MHz              |
| Wide Area BS  | 2570 - 2620 MHz | -39 dBm       | 3,84 MHz              |
| Local Area BS | 1900 - 1920 MHz | -36 dBm       | 3,84 MHz              |
| Local Area BS | 2010 - 2025 MHz | -36 dBm       | 3,84 MHz              |
| Local Area BS | 2570 - 2620 MHz | -36 dBm       | 3,84 MHz              |

**Table 6.20B: BS Spurious emissions limits for operation in same geographic area with unsynchronised 1,28 Mcps TDD**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -39 dBm       | 1,28 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -39 dBm       | 1,28 MHz              |
| Wide Area BS  | 2300 - 2400 MHz | -39 dBm       | 1.28MHz               |
| Wide Area BS  | 2570 - 2620 MHz | -39 dBm       | 1,28 MHz              |
| Local Area BS | 1900 - 1920 MHz | -36 dBm       | 1,28 MHz              |
| Local Area BS | 2300 - 2400 MHz | -36 dBm       | 1.28MHz               |
| Local Area BS | 2010 - 2025 MHz | -36 dBm       | 1,28 MHz              |
| Local Area BS | 2570 - 2620 MHz | -36 dBm       | 1,28 MHz              |

NOTE: The requirements in Table 6.20A and 6.20B for the Wide Area BS are based on a minimum coupling loss of 67 dB between unsynchronised TDD base stations. The requirements in Table 6.20A and 6.20B for the Local Area BS are based on a coupling loss of 70 dB between unsynchronised Wide Area and Local Area TDD base stations.

### 6.6.3.5.2 Co-located base stations

This requirement shall apply in case of co-location with unsynchronised TDD BS that comprises uplink receive functionality.

#### 6.6.3.5.2.1 Minimum Requirement

##### 6.6.3.5.2.1.1 3,84 Mcps TDD option

The RRC filtered mean power of any spurious emission in case of co-location shall not exceed the limits specified in table 6.21.

**Table 6.21: BS Spurious emissions limits for co-location with unsynchronised TDD**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -76 dBm       | 3,84 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -76 dBm       | 3,84 MHz              |
| Wide Area BS  | 2570 - 2620 MHz | -76 dBm       | 3,84 MHz              |
| Local Area BS | 1900 - 1920 MHz | -66 dBm       | 3,84 MHz              |
| Local Area BS | 2010 - 2025 MHz | -66 dBm       | 3,84 MHz              |
| Local Area BS | 2570 - 2620 MHz | -66 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.21 for the Wide Area BS are based on a minimum coupling loss of 30 dB between unsynchronised TDD base stations. The requirements in Table 6.21 for the Local Area BS are based on a minimum coupling loss of 30 dB between unsynchronised Local Area base stations. The co-location of different base station classes is not considered.

##### 6.6.3.5.2.1.2 1,28 Mcps TDD option

In geographic areas where only 1,28 Mcps TDD is deployed, the RRC filtered mean power of any spurious emission in case of co-location shall not exceed the limits specified in table 6.22, otherwise the limits in table 6.23 shall apply.

**Table 6.22: BS Spurious emissions limits for co-location with unsynchronised 1,28 Mcps TDD**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -76 dBm       | 1,28 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -76 dBm       | 1,28 MHz              |
| Wide Area BS  | 2300 - 2400 MHz | -76 dBm       | 1.28MHz               |
| Wide Area BS  | 2570 - 2620 MHz | -76 dBm       | 1,28 MHz              |
| Wide Area BS  | 1880 - 1920 MHz | -76 dBm       | 1,28 MHz              |
| Local Area BS | 1900 - 1920 MHz | -71 dBm       | 1,28 MHz              |
| Local Area BS | 2010 - 2025 MHz | -71 dBm       | 1,28 MHz              |
| Local Area BS | 2300 - 2400 MHz | -71 dBm       | 1.28MHz               |
| Local Area BS | 2570 - 2620 MHz | -71 dBm       | 1,28 MHz              |
| Local Area BS | 1880 - 1920 MHz | -71 dBm       | 1,28 MHz              |

NOTE: The requirement applies for frequencies more than 10 MHz below or above the supported frequency range declared by the vendor.

**Table 6.23: BS Spurious emissions limits for co-location with unsynchronised TDD**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -76 dBm       | 3,84 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -76 dBm       | 3,84 MHz              |
| Wide Area BS  | 2570 - 2620 MHz | -76 dBm       | 3,84 MHz              |
| Local Area BS | 1900 - 1920 MHz | -66 dBm       | 3,84 MHz              |
| Local Area BS | 2010 - 2025 MHz | -66 dBm       | 3,84 MHz              |
| Local Area BS | 2570 - 2620 MHz | -66 dBm       | 3,84 MHz              |

NOTE: The requirements in Table 6.22 and 6.23 for the Wide Area BS are based on a minimum coupling loss of 30 dB between unsynchronised TDD base stations. The requirements in Table 6.22 and 6.23 for the Local Area BS are based on a minimum coupling loss of 30 dB between unsynchronised Local Area base stations. The co-location of different base station classes is not considered.

#### 6.6.3.5.2.1.3 7,68 Mcps TDD option

The RRC filtered mean power of any spurious emission in case of co-location shall not exceed the limits specified in table 6.24 and 6.25.

**Table 6.24: BS Spurious emissions limits for co-location with unsynchronised TDD (7.68 Mcps TDD and 3.84 Mcps TDD)**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -76 dBm       | 3,84 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -76 dBm       | 3,84 MHz              |
| Wide Area BS  | 2570 - 2620 MHz | -76 dBm       | 3,84 MHz              |
| Local Area BS | 1900 - 1920 MHz | -66 dBm       | 3,84 MHz              |
| Local Area BS | 2010 - 2025 MHz | -66 dBm       | 3,84 MHz              |
| Local Area BS | 2570 - 2620 MHz | -66 dBm       | 3,84 MHz              |

**Table 6.25: BS Spurious emissions limits for co-location with unsynchronised 1,28 Mcps TDD**

| BS Class      | Band            | Maximum Level | Measurement Bandwidth |
|---------------|-----------------|---------------|-----------------------|
| Wide Area BS  | 1900 - 1920 MHz | -76 dBm       | 1,28 MHz              |
| Wide Area BS  | 2010 - 2025 MHz | -76 dBm       | 1,28 MHz              |
| Wide Area BS  | 2300 - 2400 MHz | -76 dBm       | 1.28MHz               |
| Wide Area BS  | 2570 - 2620 MHz | -76 dBm       | 1,28 MHz              |
| Local Area BS | 1900 - 1920 MHz | -71 dBm       | 1,28 MHz              |
| Local Area BS | 2010 - 2025 MHz | -71 dBm       | 1,28 MHz              |
| Local Area BS | 2300 - 2400 MHz | -71 dBm       | 1.28MHz               |
| Local Area BS | 2570 - 2620 MHz | -71 dBm       | 1,28 MHz              |

NOTE: The requirements in Table 6.24 and 6.25 for the Wide Area BS are based on a minimum coupling loss of 30 dB between unsynchronised TDD base stations. The requirements in Table 6.24 and 6.25 for the Local Area BS are based on a minimum coupling loss of 30 dB between unsynchronised Local Area base stations. The co-location of different base station classes is not considered.

### 6.6.3.6 Co-existence with PHS

This requirement may be applied for the protection of PHS in geographic areas in which both PHS and UTRA TDD are deployed. For 3.84 Mcps TDD option, this requirement is also applicable at specified frequencies falling between 12.5MHz below the first carrier frequency used and 12.5MHz above the last carrier frequency used. For 7.68 Mcps TDD option, this requirement is also applicable at specified frequencies falling between 25MHz below the first carrier frequency used and 25MHz above the last carrier frequency used.

#### 6.6.3.6.1 Minimum Requirement

##### 6.6.3.6.1.1 3,84 Mcps TDD option

The power of any spurious emission shall not exceed:

**Table 6.26: BS Spurious emissions limits for BS in geographic coverage area of PHS (3.84 Mcps TDD option)**

| Band                | Maximum Level | Measurement Bandwidth | Note  |
|---------------------|---------------|-----------------------|---|
| 1884.5 - 1919.6 MHz | -41 dBm       | 300 kHz               | Applicable for transmission in 2010-2025 MHz as defined in subclause 5.2 (a). |

##### 6.6.3.6.1.2 (void)

##### 6.6.3.6.1.3 7,68 Mcps TDD option

The power of any spurious emission shall not exceed:

**Table 6.27: BS Spurious emissions limits for BS in geographic coverage area of PHS (7.68 Mcps TDD option)**

| Band                | Maximum Level | Measurement Bandwidth | Note  |
|---------------------|---------------|-----------------------|---|
| 1884.5 - 1919.6 MHz | -41 dBm       | 300 kHz               | Applicable for transmission in 2010-2025 MHz as defined in subclause 5.2 (a). |

## 6.7 Transmit intermodulation

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

The transmit intermodulation level is the power of the intermodulation products when a CDMA modulated interference signal is injected into the antenna connector at a mean power level of 30 dB lower than that of the mean power of the subject signal.

## 6.7.1 Minimum Requirement

### 6.7.1.1 3,84 Mcps TDD Option

The frequency of the interference signal shall be  $\pm 5$  MHz,  $\pm 10$  MHz and  $\pm 15$  MHz offset from the subject signal. The Transmit intermodulation level shall not exceed the out of band or the spurious emission requirements of section 6.6.2 and 6.6.3.

### 6.7.1.2 1,28 Mcps TDD Option:

The frequency of the interference signal shall be  $\pm 1.6$  MHz,  $\pm 3.2$  MHz and  $\pm 4.8$  MHz offset from the subject signal. The Transmit intermodulation level shall not exceed the out of band or the spurious emission requirements of section 6.6.2 and 6.6.3.

### 6.7.1.3 7,68 Mcps TDD Option

The frequency of the interference signal shall be  $\pm 10$  MHz,  $\pm 20$  MHz and  $\pm 30$  MHz offset from the subject signal. The Transmit intermodulation level shall not exceed the out of band or the spurious emission requirements of section 6.6.2 and 6.6.3.

## 6.8 Transmit modulation

For the case of MBSFN-only operation, subclauses 6.8.3 and 6.8.4 shall not be applicable.

### 6.8.1 Transmit pulse shape filter

The transmit pulse-shaping filter is a root-raised cosine (RRC) with roll-off  $\alpha = 0.22$  in the frequency domain. The impulse response of the chip impulse filter  $RC_0(t)$  is

$$RC_0(t) = \frac{\sin\left(\pi \frac{t}{T_c}(1-\alpha)\right) + 4\alpha \frac{t}{T_c} \cos\left(\pi \frac{t}{T_c}(1+\alpha)\right)}{\pi \frac{t}{T_c} \left(1 - \left(4\alpha \frac{t}{T_c}\right)^2\right)}$$

Where the roll-off factor  $\alpha = 0.22$  and  $T_c$  is the chip duration.

### 6.8.2 Modulation Accuracy

The Error Vector Magnitude is a measure of the difference between the reference waveform and the measured waveform. This difference is called the error vector. Both waveforms pass through a matched Root Raised Cosine filter with bandwidth corresponding to the considered chip rate and roll-off  $\alpha = 0.22$ . Both waveforms are then further modified by selecting the frequency, absolute phase, absolute amplitude and chip clock timing so as to minimise the error vector. The EVM result is defined as the square root of the ratio of the mean error vector power to the mean reference power expressed as a %. The measurement interval is one timeslot. The requirement is valid over the total power dynamic range as specified in subclause 3.1. See Annex C of TS 25.142 for further details.

#### 6.8.2.1 Minimum Requirement

The Modulation accuracy shall not be worse than 12.5 %.

### 6.8.3 Peak Code Domain Error

The code domain error is computed by projecting the error vector power onto the code domain at a specific spreading factor. The error power for each code is defined as the ratio to the mean power of the reference waveform expressed in

dB. And the Peak Code Domain Error is defined as the maximum value for Code Domain Error. The measurement interval is one timeslot.

### 6.8.3.1 Minimum Requirement

The peak code domain error shall not exceed -28 dB at spreading factor 16. For 7.68 Mcps, the peak code domain error shall not exceed -31 dB at spreading factor 32.

## 6.8.4 Relative Code Domain Error for 64QAM modulation

The Relative Code Domain Error is computed by projecting the error vector onto the code domain at a specified spreading factor. Only the active code channels in the composite reference waveform are considered for this requirement. The Relative Code Domain Error for every active code is defined as the ratio of the mean power of the error projection onto that code, to the mean power of the active code in the composite reference waveform. This ratio is expressed in dB. The measurement interval is one timeslot.

The requirement for Relative Code Domain Error is only applicable for 64QAM modulated codes.

### 6.8.4.1 Minimum requirement

The average Relative Code Domain Error for 64QAM modulated codes shall not exceed -21.9dB at spreading factor 16.

## 6.8.5 Time alignment error in MIMO transmission

In MIMO transmission, signals are transmitted from two or more antennas. These signals shall be aligned. The time alignment error in MIMO transmission is specified as the delay between the signals from two antennas at the antenna ports.

### 6.8.5.1 Minimum Requirement

The time alignment error in MIMO for any possible configuration of two transmit antennas shall not exceed 65 ns.

# 7 Receiver characteristics

## 7.1 General

The requirements in clause 7 are expressed for a single receiver antenna connector. For receivers with antenna diversity, the requirements apply for each receiver antenna connector.

Unless otherwise stated, the receiver characteristics are specified at the BS antenna connector (test port A) with a full complement of transceivers for the configuration in normal operating conditions. If any external apparatus such as a RX amplifier, a filter or the combination of such devices is used, requirements apply at the far end antenna connector (port B).

Figure 7.1: Receiver test ports

## 7.2 Reference sensitivity level

The reference sensitivity level is the minimum mean power received at the antenna connector at which the BER shall not exceed the specific value indicated in section 7.2.1.

### 7.2.1 Minimum Requirement

#### 7.2.1.1 3,84 Mcps TDD Option

Using the reference measurement channel specified in Annex A, the reference sensitivity level and performance of the BS shall be as specified in table 7.1.

Table 7.1: BS reference sensitivity level

| BS Class      | Reference measurement channel data rate | BS reference sensitivity level | BER                        |
|---------------|---|--------------------------------|----------------------------|
| Wide Area BS  | 12.2 kbps                               | -109 dBm                       | BER shall not exceed 0.001 |
| Local Area BS | 12.2 kbps                               | -95 dBm                        | BER shall not exceed 0.001 |

#### 7.2.1.2 1,28 Mcps TDD Option

Using the reference measurement channel specified in Annex A, the reference sensitivity level and performance of the BS shall be as specified in table 7.1A

Table 7.1A: BS reference sensitivity level

| BS Class      | Reference measurement channel data rate | BS reference sensitivity level | BER                        |
|---------------|---|--------------------------------|----------------------------|
| Wide Area BS  | 12.2 kbps                               | -110 dBm                       | BER shall not exceed 0.001 |
| Local Area BS | 12.2 kbps                               | -96 dBm                        | BER shall not exceed 0.001 |

#### 7.2.1.3 7,68 Mcps TDD Option

Using the reference measurement channel specified in Annex A, the reference sensitivity level and performance of the BS shall be as specified in table 7.1B.

**Table 7.1B: BS reference sensitivity level**

| BS Class      | Reference measurement channel data rate | BS reference sensitivity level | BER                        |
|---------------|---|--------------------------------|----------------------------|
| Wide Area BS  | 12.2 kbps                               | -109 dBm                       | BER shall not exceed 0.001 |
| Local Area BS | 12.2 kbps                               | -95 dBm                        | BER shall not exceed 0.001 |

## 7.3 Dynamic range

Receiver dynamic range is the receiver ability to handle a rise of interference in the reception frequency channel. The receiver shall fulfil a specified BER requirement for a specified sensitivity degradation of the wanted signal in the presence of an interfering AWGN signal in the same reception frequency channel.

### 7.3.1 Minimum requirement

#### 7.3.1.1 3,84 Mcps TDD Option

The BER shall not exceed 0.001 for the parameters specified in Table 7.2.

**Table 7.2: Dynamic Range**

| Parameter                               |               | Level | Unit         |
|---|---------------|-------|--------------|
| Reference measurement channel data rate |               | 12.2  | kbps         |
| Wanted signal mean power                | Wide Area BS  | -79   | dBm          |
|   | Local Area BS | -65   | dBm          |
| Interfering AWGN signal                 | Wide Area BS  | -73   | dBm/3.84 MHz |
|   | Local Area BS | -59   | dBm/3.84 MHz |

#### 7.3.1.2 1,28 Mcps TDD Option:

The BER shall not exceed 0.001 for the parameters specified in Table 7.2A

**Table 7.2A: Dynamic Range**

| Parameter                               |               | Level | Unit         |
|---|---------------|-------|--------------|
| Reference measurement channel data rate |               | 12.2  | kbps         |
| Wanted signal mean power                | Wide Area BS  | -80   | dBm          |
|   | Local Area BS | -66   | dBm          |
| Interfering AWGN signal                 | Wide Area BS  | -76   | dBm/1.28 MHz |
|   | Local Area BS | -62   | dBm/1.28 MHz |

#### 7.3.1.3 7,68 Mcps TDD Option

The BER shall not exceed 0.001 for the parameters specified in Table 7.2B.

**Table 7.2B: Dynamic Range**

| Parameter                               |               | Level | Unit         |
|---|---------------|-------|--------------|
| Reference measurement channel data rate |               | 12.2  | kbps         |
| Wanted signal mean power                | Wide Area BS  | -79   | dBm          |
|   | Local Area BS | -65   | dBm          |
| Interfering AWGN signal                 | Wide Area BS  | -70   | dBm/7.68 MHz |
|   | Local Area BS | -56   | dBm/7.68 MHz |

## 7.4 Adjacent Channel Selectivity (ACS)

Adjacent channel selectivity (ACS) is a measure of the receiver ability to receive a wanted signal at its assigned channel frequency in the presence of a single code CDMA modulated adjacent channel signal at a given frequency offset from the center frequency of the assigned channel. ACS is the ratio of the receiver filter attenuation on the assigned channel frequency to the receiver filter attenuation on the adjacent channel(s).

### 7.4.1 Minimum Requirement

#### 7.4.1.1 3,84 Mcps TDD Option

The BER shall not exceed 0.001 for the parameters specified in table 7.3.

**Table 7.3: Adjacent channel selectivity**

| Parameter                               | Level         | Unit |
|---|---------------|------|
| Reference measurement channel data rate | 12.2          | kbps |
| Wanted signal mean power                | Wide Area BS  | -103 |
|   | Local Area BS | -89  |
| Interfering signal mean power           | Wide Area BS  | -52  |
|   | Local Area BS | -38  |
| Fuw offset (Modulated)                  | 5             | MHz  |

#### 7.4.1.2 1,28 Mcps TDD Option

The BER shall not exceed 0.001 for the parameters specified in table 7.3A

**Table 7.3A: Adjacent channel selectivity**

| Parameter                               | Level         | Unit |
|---|---------------|------|
| Reference measurement channel data rate | 12.2          | kbps |
| Wanted signal mean power                | Wide Area BS  | -104 |
|   | Local Area BS | -90  |
| Interfering signal mean power           | Wide Area BS  | -55  |
|   | Local Area BS | -41  |
| Fuw offset (Modulated)                  | 1.6           | MHz  |

#### 7.4.1.3 7,68 Mcps TDD Option

The BER shall not exceed 0.001 for the parameters specified in table 7.3B.

**Table 7.3B: Adjacent channel selectivity**

| Parameter                               | Level         | Unit |
|---|---------------|------|
| Reference measurement channel data rate | 12.2          | kbps |
| Wanted signal mean power                | Wide Area BS  | -103 |
|   | Local Area BS | -89  |
| Interfering signal mean power           | Wide Area BS  | -49  |
|   | Local Area BS | -35  |
| Fuw offset (Modulated)                  | 10            | MHz  |

## 7.5 Blocking characteristics

The blocking characteristics is a measure of the receiver ability to receive a wanted signal at its assigned channel frequency in the presence of an unwanted interferer on frequencies other than those of the adjacent channels. The

blocking performance requirement applies to interfering signals with center frequency within the ranges specified in the tables below, using a 1MHz step size.

## 7.5.0 Minimum requirement

The static reference performance as specified in clause 7.2.1 shall be met with a wanted and an interfering signal coupled to BS antenna input using the parameters as specified in table 7.4-1 for the Wide Area BS and as specified in table 7.4-2 for the Local Area BS.

### 7.5.0.1 3,84 Mcps TDD Option

**Table 7.4-1 (a): Blocking requirements for Wide Area BS for operating bands defined in 5.2(a)**

| Centre Frequency of Interfering Signal            | Interfering Signal Mean Power | Wanted Signal Mean Power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|---|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 1900 - 1920 MHz, 2010 - 2025 MHz                  | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 1880 - 1900 MHz, 1990 - 2010 MHz, 2025 - 2045 MHz | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 1920 - 1980 MHz                                   | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 1 - 1880 MHz, 1980 - 1990 MHz, 2045 - 12750 MHz   | -15 dBm                       | -103 dBm                 | —                                    | CW carrier                 |

**Table 7.4-1(b): Blocking requirements for Wide Area BS for operating bands defined in 5.2(b)**

| Centre Frequency of Interfering Signal | Interfering Signal Mean Power | Wanted Signal Mean Power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 1850 - 1990 MHz                        | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 1830 - 1850 MHz, 1990 - 2010 MHz       | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 1 - 1830 MHz, 2010 - 12750 MHz         | -15 dBm                       | -103 dBm                 | —                                    | CW carrier                 |

**Table 7.4-1(c): Blocking requirements for Wide Area BS for operating bands defined in 5.2(c)**

| Centre Frequency of Interfering Signal | Interfering Signal Mean Power | Wanted Signal Mean Power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 1910 - 1930 MHz                        | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 1890 - 1910 MHz, 1930 - 1950 MHz       | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 1 - 1890 MHz, 1950 - 12750 MHz         | -15 dBm                       | -103 dBm                 | —                                    | CW carrier                 |

**Table 7.4-1 (d): Blocking requirements for Wide Area BS for operating bands defined in 5.2(d)**

| Centre Frequency of Interfering Signal | Interfering Signal Mean Power | Wanted Signal Mean Power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 2570 - 2620 MHz                        | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 2550 - 2570 MHz                        | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 2620 - 2640 MHz                        |                               |                          |                                      |                            |
| 2500 - 2570 MHz                        | -40 dBm                       | -103 dBm                 | 10 MHz                               | WCDMA signal with one code |
| 2620 - 2690 MHz                        |                               |                          |                                      |                            |
| 1 - 2550 MHz, 2690 - 12750 MHz         | -15 dBm                       | -103 dBm                 | —                                    | CW carrier                 |

**Table 7.4-2 (a): Blocking requirements for Local Area BS for operating bands defined in 5.2(a)**

| Centre Frequency of Interfering Signal            | Interfering Signal mean power | Wanted Signal mean power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|---|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 1900 - 1920 MHz, 2010 - 2025 MHz                  | -30 dBm                       | -89 dBm                  | 10 MHz                               | WCDMA signal with one code |
| 1880 - 1900 MHz, 1990 - 2010 MHz, 2025 - 2045 MHz | -30 dBm                       | -89 dBm                  | 10 MHz                               | WCDMA signal with one code |
| 1920 - 1980 MHz                                   | -30 dBm                       | -89 dBm                  | 10 MHz                               | WCDMA signal with one code |
| 1 - 1880 MHz, 1980 - 1990 MHz, 2045 - 12750 MHz   | -15 dBm                       | -89 dBm                  | —                                    | CW carrier                 |

**Table 7.4-2 (b): Blocking requirements for Local Area BS for operating bands defined in 5.2(b)**

| Centre Frequency of Interfering Signal | Interfering Signal mean power | Wanted Signal mean power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 1850 - 1990 MHz                        | -30 dBm                       | -89 dBm                  | 10 MHz                               | WCDMA signal with one code |
| 1830 - 1850 MHz, 1990 - 2010 MHz       | -30 dBm                       | -89 dBm                  | 10 MHz                               | WCDMA signal with one code |
| 1 - 1830 MHz, 2010 - 12750 MHz         | -15 dBm                       | -89 dBm                  | —                                    | CW carrier                 |

**Table 7.4-2 (c): Blocking requirements for Local BS for operating bands defined in 5.2(c)**

| Centre Frequency of Interfering Signal | Interfering Signal mean power | Wanted Signal mean power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 1910 - 1930 MHz                        | -30 dBm                       | -89 dBm                  | 10 MHz                               | WCDMA signal with one code |
| 1890 - 1910 MHz, 1930 - 1950 MHz       | -30 dBm                       | -89 dBm                  | 10 MHz                               | WCDMA signal with one code |

### 7.5.1 Co-location with GSM900 and/or DCS 1800

This additional blocking requirement may be applied for the protection of TDD BS receivers when GSM900 and/or DCS1800 BTS are co-located with UTRA TDD Wide Area BS.

The blocking performance requirement applies to interfering signals with center frequency within the ranges specified in the tables below, using a 1MHz step size.

In case this additional blocking requirement is applied, the static reference performance as specified in clause 7.2.1 shall be met with a wanted and an interfering signal coupled to BS antenna input using the following parameters.

## 7.5.1.1 3,84 Mcps TDD Option

**Table 7.4 (d): Additional blocking requirements for operating bands defined in 5.2(a) and 5.2 (d) when co-located with GSM900**

| Centre Frequency of Interfering Signal | Interfering Signal Mean Power | Wanted Signal Mean Power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 921 - 960 MHz                          | +16 dBm                       | -103 dBm                 | —                                    | CW carrier                 |

**Table 7.4 (e): Additional blocking requirements for operating bands defined in 5.2(a) and 5.2 (d) when co-located with DCS1800**

|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 1805 - 1880 MHz                        | +16 dBm                       | -103 dBm                 | —                                    | CW carrier                 |

## 7.5.2 Co-location with UTRA-FDD

This additional blocking requirement may be applied for the protection of TDD BS receivers when UTRA-FDD are co-located with UTRA TDD Wide Area BS.

The blocking performance requirement applies to interfering signals with center frequency within the ranges specified in the tables below, using a 1MHz step size.

In case this additional blocking requirement is applied, the static reference performance as specified in clause 7.2.1 shall be met with a wanted and an interfering signal coupled to BS antenna input using the following parameters.

### 7.5.2.1 3,84 Mcps TDD Option

**Table 7.4F: Additional blocking requirements for operating bands defined in 5.2(d) when co-located with UTRA-FDD WA BS**

| Centre Frequency of Interfering Signal | Interfering Signal Mean Power | Wanted Signal Mean Power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 2620 - 2690 MHz                        | +13 dBm                       | -103 dBm                 | —                                    | CW carrier                 |

|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 2620 - 2690 MHz                        | +13 dBm                       | -103 dBm                 | —                                    | CW carrier                 |

**Table 7.4K: Additional blocking requirements for operating bands defined in 5.2(d) when co-located with UTRA-FDD LA BS**

| Center Frequency of Interfering Signal | Interfering Signal Mean Power | Wanted Signal Mean Power | Minimum Offset of Interfering Signal | Type of Interfering Signal |
|--|-------------------------------|--------------------------|--------------------------------------|----------------------------|
| 2620 - 2690 MHz                        | -6 dBm                        | -103 dBm                 | —                                    | CW carrier                 |

## 7.6 Intermodulation characteristics

Third and higher order mixing of the two interfering RF signals can produce an interfering signal in the band of the desired channel. Intermodulation response rejection is a measure of the capability of the receiver to receive a wanted signal on its assigned channel frequency in the presence of two or more interfering signals which have a specific frequency relationship to the wanted signal.

### 7.6.1 Minimum requirement

The static reference performance as specified in clause 7.2.1 should be met when the following signals are coupled to BS antenna input.

- A wanted signal at the assigned channel frequency, with mean power 6 dB above the static reference level.
- Two interfering signals with the following parameters.

#### 7.6.1.1 3,84 Mcps TDD Option

**Table 7.5: Intermodulation requirement**

| Interfering Signal Mean Power |               | Offset | Type of Interfering Signal |
|-------------------------------|---------------|--------|----------------------------|
| Wide Area BS                  | Local Area BS |        |                            |
| - 48 dBm                      | - 38 dBm      | 10 MHz | CW signal                  |
| - 48 dBm                      | - 38 dBm      | 20 MHz | WCDMA signal with one code |

## 7.7 Spurious emissions

The spurious emissions power is the power of emissions generated or amplified in a receiver that appear at the BS antenna connector. The requirements apply to all BS with separate RX and TX antenna port. The test shall be performed when both TX and RX are on with the TX port terminated.

For all BS with common RX and TX antenna port the transmitter spurious emission as specified in section 6.6.3 is valid.

### 7.7.1 Minimum Requirement

#### 7.7.1.1 3,84 Mcps TDD Option

The power of any spurious emission shall not exceed:

**Table 7.6: Receiver spurious emission requirements**

| Band   | Maximum level | Measurement Bandwidth | Note   |
|--|---------------|-----------------------|--|
| 30 MHz - 1 GHz   | -57 dBm       | 100 kHz               |  |
| 1 GHz - 1.9 GHz and 1.98 GHz - 2.01 GHz and 2.025 GHz - 2.5 GHz    | -47 dBm       | 1 MHz                 | With the exception of frequencies between 12.5MHz below the first carrier frequency and 12.5MHz above the last carrier frequency used by the BS. |
| 1.9 GHz - 1.98 GHz and 2.01 GHz - 2.025 GHz and 2.5 GHz - 2.62 GHz | -78 dBm       | 3.84 MHz              | With the exception of frequencies between 12.5MHz below the first carrier frequency and 12.5MHz above the last carrier frequency used by the BS. |
| 2.62 GHz - 12.75 GHz   | -47 dBm       | 1 MHz                 | With the exception of frequencies between 12.5MHz below the first carrier frequency and 12.5MHz above the last carrier frequency used by the BS. |

**Table 7.6AA: Additional receiver spurious emission requirements**

| Band   | Maximum level | Measurement Bandwidth | Note  |
|--|---------------|-----------------------|---|
| 815MHz $\square$ 850MHz<br>1749.9MHz $\square$ 1784.9MHz | -78 dBm       | 3.84 MHz              | Applicable in Japan<br>With the exception of frequencies between 12.5MHz below the first carrier frequency and 12.5MHz above the last carrier frequency used by the BS. |

In addition to the requirements in table 7.6 and 7.6AA, the co-existence requirements for co-located base stations specified in subclause 6.6.3.2.2, 6.6.3.3.2 and 6.6.3.4.2 may also be applied.

#### 7.7.1.2 1,28 Mcps TDD Option

The power of any spurious emission shall not exceed:

**Table 7.6A-1: General receiver spurious emission minimum requirements**

| Band              | Maximum level | Measurement Bandwidth | Note   |
|-------------------|---------------|-----------------------|--|
| 30MHz - 1 GHz     | -57 dBm       | 100 kHz               |  |
| 1 GHz - 12.75 GHz | -47 dBm       | 1 MHz                 | With the exception of frequencies between 4 MHz below the first carrier frequency and 4 MHz above the last carrier frequency used by the BS. |

**Table 7.6A-2: Additional spurious emission requirements**

| Operating Band | Band            | Maximum level | Measurement Bandwidth | Note   |
|----------------|-----------------|---------------|-----------------------|--|
| a              | 1900 - 1920 MHz | -83 dBm       | 1.28 MHz              | With the exception of frequencies between 4 MHz below the first carrier frequency and 4 MHz above the last carrier frequency used by the BS. |
|                | 2010 – 2025 MHz | -83 dBm       | 1.28 MHz              |  |
| b              | 1850 - 1910 MHz | -83 dBm       | 1.28 MHz              |  |
|                | 1930 – 1990 MHz | -83 dBm       | 1.28 MHz              |  |
| c              | 1910 – 1930 MHz | -83 dBm       | 1.28 MHz              |  |
| d              | 2570 - 2620 MHz | -83 dBm       | 1.28 MHz              |  |
| e              | 2300 - 2400 MHz | -83 dBm       | 1.28 MHz              |  |
| f              | 1880 - 1920 MHz | -83 dBm       | 1.28 MHz              |  |

In addition, the requirement in Table 7.6A-3 may be applied to geographic areas in which both UTRA-TDD and UTRA-FDD are deployed.

**Table 7.6A-3: Additional spurious emission requirements for the FDD bands**

| Operating Band | Protected Band  | Maximum level | Measurement Bandwidth | Note   |
|----------------|-----------------|---------------|-----------------------|--|
| a, e, f        | 1920 - 1980     | -78 dBm       | 3.84 MHz              | With the exception of frequencies between 4 MHz below the first carrier frequency and 4 MHz above the last carrier frequency used by the BS. |
| d, e           | 2500 – 2570 MHz | -78 dBm       | 3.84 MHz              |  |

### 7.7.1.3 7,68 Mcps TDD Option

The power of any spurious emission shall not exceed:

**Table 7.6B: Receiver spurious emission requirements**

| Band   | Maximum level | Measurement Bandwidth | Note   |
|--|---------------|-----------------------|--|
| 30 MHz - 1 GHz   | -57 dBm       | 100 kHz               |  |
| 1 GHz - 1.9 GHz and<br>1.98 GHz - 2.01 GHz<br>2.025 GHz - 2.5 GHz    | -47 dBm       | 1 MHz                 | With the exception of frequencies between 25MHz below the first carrier frequency and 25MHz above the last carrier frequency used by the BS. |
| 1.9 GHz - 1.98 GHz and<br>2.01 GHz - 2.025 GHz<br>2.5 GHz - 2.62 GHz | -75 dBm       | 7.68 MHz              | With the exception of frequencies between 25MHz below the first carrier frequency and 25MHz above the last carrier frequency used by the BS. |
| 2.62 GHz - 12.75 GHz   | -47 dBm       | 1 MHz                 | With the exception of frequencies between 25MHz below the first carrier frequency and 25MHz above the last carrier frequency used by the BS. |

**Table 7.6BB: Additional receiver spurious emission requirements**

| Band  | Maximum level | Measurement Bandwidth | Note  |
|---|---------------|-----------------------|---|
| 815MHz - 850MHz<br>1427.9MHz - 1452.9MHz<br>1749.9MHz - 1784.9MHz | -78 dBm       | 3.84 MHz              | Applicable in Japan<br>With the exception of frequencies between 25MHz below the first carrier frequency and 25MHz above the last carrier frequency used by the BS. |

In addition to the requirements in table 7.6B and 7.6BB, the co-existence requirements for co-located base stations specified in subclause 6.6.3.2.2, 6.6.3.3.2 and 6.6.3.4.2 may also be applied.

## 8 Performance requirement

### 8.1 General

Performance requirements for the BS are specified for the measurement channels defined in Annex A and the propagation conditions in Annex B. The requirements only apply to those measurement channels that are supported by the base station.

The requirements only apply to a base station with dual receiver antenna diversity. The required  $\hat{I}_{\text{or}}/I_{\text{oc}}$  shall be applied separately at each antenna port.

**Table 8.1: Summary of Base Station performance targets**

| Physical channel | Measurement channel | Static                   | Multi-path Case 1        | Multi-path Case 2        | Multi-path Case 3                 |
|------------------|---------------------|--------------------------|--------------------------|--------------------------|-----------------------------------|
|                  |                     | Performance metric       |                          |                          |                                   |
| DCH              | 12.2 kbps           | BLER< $10^{-2}$          | BLER< $10^{-2}$          | BLER< $10^{-2}$          | BLER< $10^{-2}$                   |
|                  | 64 kbps             | BLER< $10^{-1}, 10^{-2}$ | BLER< $10^{-1}, 10^{-2}$ | BLER< $10^{-1}, 10^{-2}$ | BLER< $10^{-1}, 10^{-2}, 10^{-3}$ |
|                  | 144 kbps            | BLER< $10^{-1}, 10^{-2}$ | BLER< $10^{-1}, 10^{-2}$ | BLER< $10^{-1}, 10^{-2}$ | BLER< $10^{-1}, 10^{-2}, 10^{-3}$ |
|                  | 384 kbps            | BLER< $10^{-1}, 10^{-2}$ | BLER< $10^{-1}, 10^{-2}$ | BLER< $10^{-1}, 10^{-2}$ | BLER< $10^{-1}, 10^{-2}, 10^{-3}$ |

### 8.2 Demodulation in static propagation conditions

#### 8.2.1 Demodulation of DCH

The performance requirement of DCH in static propagation conditions is determined by the maximum Block Error Rate (BLER) allowed when the receiver input signal is at a specified  $\hat{I}_{\text{or}}/I_{\text{oc}}$  limit. The BLER is calculated for each of the measurement channels supported by the base station.

##### 8.2.1.1 Minimum requirement

###### 8.2.1.1.1 3,84 Mcps TDD Option

For the parameters specified in Table 8.2 the BLER should not exceed the piece-wise linear BLER curve specified in Table 8.3. These requirements are applicable for TFCS size 16.

**Table 8.2: Parameters in static propagation conditions**

| <b>Parameters</b>                       |              | <b>Unit</b> | <b>Test 1</b>      | <b>Test 2</b>      | <b>Test 3</b>     | <b>Test 4</b> |

## 8.3 Demodulation of DCH in multipath fading conditions

### 8.3.1 Multipath fading Case 1

The performance requirement of DCH in multipath fading Case 1 is determined by the maximum Block Error Rate (BLER) allowed when the receiver input signal is at a specified  $\hat{I}_{or}/I_{oc}$  limit. The BLER is calculated for each of the measurement channels supported by the base station.

#### 8.3.1.1 Minimum requirement

##### 8.3.1.1.1 3,84 Mcps TDD Option

For the parameters specified in Table 8.4 the BLER should not exceed the piece-wise linear BLER curve specified in Table 8.5. These requirements are applicable for TFCS size 16.

**Table 8.4: Parameters in multipath Case 1 channel**

| Parameters                              |               | Unit         | Test 1               | Test 2               | Test 3            | Test 4 |
|---|---------------|--------------|----------------------|----------------------|-------------------|--------|
| Number of DPCH <sub>o</sub>             |               |              | 6                    | 4                    | 0                 | 0      |

## 8.3.2 Multipath fading Case 2

The performance requirement of DCH in multipath fading Case 2 is determined by the maximum Block Error Rate (BLER) allowed when the receiver input signal is at a specified  $\hat{I}_{or}/I_{oc}$  limit. The BLER is calculated for each of the measurement channels supported by the base station.

This requirement shall not be applied to the Local Area BS.

### 8.3.2.1 Minimum requirement

#### 8.3.2.1.1 3,84 Mcps TDD Option

For the parameters specified in Table 8.6 the BLER should not exceed the piece-wise linear BLER curve specified in Table 8.7. These requirements are applicable for TFCS size 16.

**Table 8.6: Parameters in multipath Case 2 channel**

| Parameters                              | Unit         | Test 1               | Test 2            | Test 3            | Test 4 |
|---|--------------|----------------------|-------------------|-------------------|--------|
| Number of DPCH <sub>o</sub>             |              | 2                    | 0                 | 0                 | 0      |
| $\frac{DPCH_o - E_c}{I_{or}}$           | dB           | -6                   | 0                 | 0                 | 0      |
| I <sub>oc</sub>                         | dBm/3.84 MHz |                      | -89               |                   |        |
| Cell Parameter*                         |              |                      | 0,1               |                   |        |
| DPCH Channelization Codes*              | C(k,Q)       | C(1,8)               | C(1,4)<br>C(5,16) | C(1,2)<br>C(9,16) | C(1,2) |

| 4           | 4.8                                       | $10^{-1}$ |
|             | 7.1                                       | $10^{-2}$ |

### 8.3.2.1.3 7,68 Mcps TDD Option

For the parameters specified in Table 8.6B the BLER should not exceed the piece-wise linear BLER curve specified in Table 8.7B. These requirements are applicable for TFCS size 16.

**Table 8.6B: Parameters in multipath Case 2 channel**

| Parameters   | Unit         | Test 1                        |
|--|--------------|-------------------------------|
| Number of DPCH <sub>0</sub>  |              | 6                             |
| $\frac{DPCH_o - E_c}{I_{or}}$  | dB           | -9                            |
| $I_{oc}$   | dBm/7.68 MHz | -89                           |
| Cell Parameter*  |              | 0,1                           |

| *Note: Refer to TS 25.223 for definition of channelization codes and cell parameter. |              |                               |

**Table 8.7B: Performance requirements in multipath Case 2 channel.**

| Test Number | $\frac{\hat{I}_{or}}{I_{oc}} [\text{dB}]$ | BLER      |
|-------------|---|-----------|
| 1           | 1   | $10^{-2}$ |

### 8.3.3 Multipath fading Case 3

The performance requirement of DCH in multipath fading Case 3 is determined by the maximum Block Error Rate (BLER) allowed when the receiver input signal is at a specified  $\hat{I}_{or}/I_{oc}$  limit. The BLER is calculated for each of the measurement channels supported by the base station.

This requirement shall not be applied to the Local Area BS.

#### 8.3.3.1 Minimum requirement

##### 8.3.3.1.1 3,84 Mcps TDD Option

For the parameters specified in Table 8.8 the BLER should not exceed the piece-wise linear BLER curve specified in Table 8.9. These requirements are applicable for TFCS size 16.

**Table 8.8: Parameters in multipath Case 3 channel**

| Parameters                              | Unit         | Test 1               | Test 2            | Test 3            | Test 4 |
|---|--------------|----------------------|-------------------|-------------------|--------|
| Number of DPCH <sub>o</sub>             |              | 2                    | 0                 | 0                 | 0      |
| $\frac{DPCH_o - E_c}{I_{or}}$           | dB           | -6                   | 0                 | 0                 | 0      |
| I <sub>oc</sub>                         | dBm/3.84 MHz |                      | -89               |                   |        |
| Cell Parameter*                         |              |                      | 0,1               |                   |        |

## 8.4 Demodulation of E-DCH FRC in multipath fading conditions

### 8.4.1 Minimum requirement

#### 8.4.1.1 3.84 Mcps TDD Option

The performance requirement of the E-DCH in multi path fading condition is determined by the minimum throughput, R. For the test parameters specified in Table 8.10, the minimum requirements are specified in Table 8.11.

**Table 8.10: Test parameters for testing E-DCH (3.84 Mcps TDD Option)**

| Parameter   | Unit          | Value        |                       |         |
|---|---------------|--------------|-----------------------|---------|
|   |               | FRC1         | FRC2                  | FRC3    |
| Max information rate  | kbps          | 34.7         | 1083.1                | 2073.7  |
| I <sub>oc</sub>   | Wide Area BS  | dBm/3.84 MHz | -89                   |         |
|   | Local Area BS | dBm/3.84 MHz | -74                   |         |
| E-DCH_E <sub>o</sub> /I <sub>or</sub>   | dB            | 0            | 0                     | 0       |
| Cell Parameter*   |               |              | 0, 1                  |         |

**Table 8.13 Minimum Requirement for E-DCH (1.28 Mcps TDD Option)**

| Fixed Reference Channel |     | Reference value, $\hat{I}_{or}/I_{oc}$ (dB), for R ≥ 30% and R ≥ 70% of maximum information bit rate |       |       |       |
|-------------------------|-----|--|-------|-------|-------|
| Propagation conditions  |     | FRC1   | FRC2  | FRC3  | FRC4  |
| Pedestrian A (3 kmph)   | 30% | -6.78  | -1.58 | 2.84  | 6.34  |
|                         | 70% | -1.83  | 4.6   | 10.19 | 13.45 |
| Pedestrian B (3 kmph)   | 30% | -5.62  | -1.1  | 2.88  | 6.55  |
|                         | 70% | -1.65  | 5.09  | 8.99  | 12.26 |
| Vehicular A (30 kmph)   | 30% | -4.96  | -0.88 | 3.09  | 7.14  |
|                         | 70% | -1.2   | 6.0   | 10.89 | 14.01 |

#### 8.4.1.3 7.68 Mcps TDD Option

The performance requirement of the E-DCH in multi path fading condition is determined by the minimum throughput, R. For the test parameters specified in Table 8.14, the minimum requirements are specified in Table 8.15.

**Table 8.14: Test parameters for testing E-DCH (7.68 Mcps TDD Option)**

| Parameter   | Unit          | Value        |                       |         |
|---|---------------|--------------|-----------------------|---------|
|   |               | FRC1         | FRC2                  | FRC3    |
| Max information rate  | kbps          | 35.9         | 1083.1                | 2085.1  |
| $I_{oc}$  | Wide Area BS  | dBm/7.68 MHz | -89                   |         |

## 8.5 Performance of ACK detection for HS-SICH

### 8.5.1 Minimum requirement

#### 8.5.1.1 3.84 Mcps TDD Option

(void)

#### 8.5.1.2 1.28 Mcps TDD Option

The performance requirement of the HS-SICH type 1 is ACK error detection,  $P(\text{ACK} \rightarrow \text{NACK})$ . Performance requirements are specified for the reference measurement channel of HS-SICH type 1 and four propagation conditions: static, multi-path fading case 1, case2 and case3. The reference measurement channel for HS-SICH type 1 is defined in Annex A.4. The propagation conditions are defined in Annex B.2.1.

For the test parameters specified in Table 8.17A, the minimum requirements are specified in Table 8.18A.

**Table 8.17A: Test parameters for testing ACK error detection using HS-SICH type1 (1.28Mcps TDD Option)**

| Parameters  | Unit         | Test                           |
|---|--------------|--------------------------------|
| Number of DPCH <sub>o</sub>   |              | 2                              |
| Spread factor of DPCH <sub>o</sub>  |              | 8                              |
| Scrambling code and basic midamble code number (note)                               |              | 0                              |
| DPCH <sub>o</sub> Channelization Codes*   | C(k,Q)       | C(i,8)<br>$2 \leq i \leq 3$    |
| $\frac{DPCH_o - E_c}{I_{or}}$   | dB           | -4                             |
| $\frac{HS - SICH - E_c}{I_{or}}$  | dB           | -7                             |
| I <sub>oc</sub>   | dBm/1.28 MHz | -91                            |
| Closed loop power control   |              | Off                            |
| Midamble  |              | Default midamble               |
| Propagation condition   |              | Static, case1, case2 and case3 |
| NOTE: Refer to TS 25.223 for definition of channelization codes and cell parameter. |              |                                |

**Table 8.18A Minimum Requirement for ACK error detection using HS-SICH type1 (1.28Mcps TDD Option)**

| Propagation condition | $\frac{\hat{I}_{or}}{I_{oc}} [\text{dB}]$ | Required error ratio |
|-----------------------|---|----------------------|
| Static                | -3.1                                      | $< 10^{-2}$          |
| Case 1                | 1.2                                       | $< 10^{-2}$          |
| Case 2                | 0.9                                       | $< 10^{-2}$          |
| Case 3                | 0.2                                       | $< 10^{-2}$          |

The performance requirement of the HS-SICH type2 is ACK error detection,  $P(\text{ACK} \rightarrow \text{NACK})$ . Performance requirements are specified for the reference measurement channel of HS-SICH type2 and three propagation conditions: static, multi-path fading case 1, and case2. The reference measurement channel for HS-SICH type2 is defined in Annex A.4. The propagation conditions are defined in Annex B.2.1.

For the test parameters specified in Table 8.19A, the minimum requirements are specified in Table 8.20A.

**Table 8.19A: Test parameters for testing ACK error detection using HS-SICH type2 (1.28Mcps TDD Option)**

| Parameters   | Unit         | Test                     |
|--|--------------|--------------------------|
| Number of DPCH <sub>o</sub>  |              | 2                        |
| Spread factor of DPCH <sub>o</sub>   |              | 8                        |
| Scrambling code and basic midamble code number (note)                              |              | 0                        |
| DPCH <sub>o</sub> Channelization Codes*  | C(k,Q)       | C(i,8)<br>2 ≤ i ≤ 3      |
| $\frac{DPCH_o - E_c}{I_{or}}$  | dB           | -4.8                     |
| $\frac{HS - SICH - E_c}{I_{or}}$   | dB           | -4.8                     |
| I <sub>oc</sub>  | dBm/1.28 MHz | -91                      |
| Closed loop power control  |              | Off                      |
| Midamble   |              | Default midamble         |
| Propagation condition  |              | Static, case1, and case2 |
| NOTE: Refer to TS 25.223 for definition of channelizationcodes and cell parameter. |              |                          |

**Table 8.20A Minimum Requirement for ACK error detection using HS-SICH type2 (1.28Mcps TDD Option)**

| Propagation condition | $\frac{\hat{I}_{or}}{I_{oc}} [\text{dB}]$ | Required error ratio |
|-----------------------|---|----------------------|
| Static                | -5.3                                      | $< 10^{-2}$          |
| Case 1                | -1.2                                      | $< 10^{-2}$          |
| Case 2                | -0.7                                      | $< 10^{-2}$          |

## Annex B (normative): Propagation conditions

### B.1 Static propagation condition

The propagation for the static performance measurement is an Additive White Gaussian Noise (AWGN) environment. No fading and multi-paths exist for this propagation model.

---

### B.2 Multi-path fading propagation conditions

#### B.2.1 3,84 Mcps TDD Option

Table B1 shows propagation conditions that are used for the performance measurements in multi-path fading environment. All taps have classical Doppler spectrum, defined as:

$$(CLASS) \quad S(f) \propto 1/(1 - (f/f_D)^2)^{0.5} \quad \text{for } f \in -f_d, f_d.$$

**Table B.1: Propagation Conditions for Multi path Fading Environments for operations referenced in 5.2 a), 5.2 b) and 5.2 c)**

| Case 1, speed 3km/h |                          | Case 2, speed 3 km/h |                          | Case 3, 120 km/h    |                          |
|---------------------|--------------------------|----------------------|--------------------------|---------------------|--------------------------|
| Relative Delay [ns] | Relative Mean Power [dB] | Relative Delay [ns]  | Relative Mean Power [dB] | Relative Delay [ns] | Relative Mean Power [dB] |

#### B.2.2 1,28 Mcps TDD Option

TableB2 shows propagation conditions that are used for the performance measurements in multi-path fading environment. All taps have classical Doppler spectrum, defined as:

$$(CLASS) \quad S(f) \propto 1/(1 - (f/f_D)^2)^{0.5} \quad \text{for } f \in -f_d, f_d.$$

**TableB.2: Propagation Conditions for Multi-Path Fading Environments**

| Case 1                                       |                          | Case 2  |                          | Case 3  |                          |
|--|--------------------------|---|--------------------------|---|--------------------------|

| RP-40 | RP-080384 | 0226 | 1 UMTS2300MHz propagation channel model addition for 1.28Mcps TDD in 25.105        | B | 7.9.0 | 8.0.0 | RInImp8-UMTS2300T DD |
| RP-40 | RP-080384 | 0225 | UMTS2300MHz Receiver performance addition for 1.28Mcps TDD in 25.105               | B | 7.9.0 | 8.0.0 | RInImp8-UMTS2300T DD |
| RP-40 | RP-080384 | 0224 | UMTS2300MHz Transmitter performance addition for 1.28Mcps TDD in 25.105            | B | 7.9.0 | 8.0.0 | RInImp8-UMTS2300T DD |
| RP-40 | RP-080384 | 0223 | 1 UMTS2300MHz New band introduction for 1.28Mcps TDD in 25.105                     | B | 7.9.0 | 8.0.0 | RInImp8-UMTS2300T DD |
| RP-41 | RP-080636 | 0229 | Modify the Fixed Reference Channels of E-DCH for LCR TDD                           | F | 8.0.0 | 8.1.0 | TEI7                 |
| RP-42 | RP-080900 | 235  | 1 BS reference measurement channel and performance requirement for 384kbps service | A | 8.1.0 | 8.2.0 | TEI4                 |
| RP-42 | RP-080939 | 236  | Introduction of band 1880MHz   | B | 8.1.0 | 8.2.0 | RinImp9-UMTS1880T DD |
| RP-43 | RP-090194 | 239  | Introduction of 3.84Mcps TDD MBSFN IMB   | B | 8.2.0 | 8.3.0 | MBSFN-DOB            |
| RP-43 | RP-090197 | 237  | UMTS1880MHz: transmitter characteristic  | F | 8.2.0 | 8.3.0 | RInImp9-UMTS1880T DD |
| RP-43 | RP-090197 | 238  | UMTS1880MHz: receiver characteristic and propagation conditions                    | F | 8.2.0 | 8.3.0 | RInImp9-UMTS1880T DD |
| RP-43 | RP-090199 | 240  | Adding Time alignment error requirements for LCR TDD Base Station MIMO             | F | 8.2.0 | 8.3.0 | RANimp-MIMOLCR       |
|       |           |      | Updated history table  |   | 8.3.0 | 8.3.1 |                      |
| RP-44 | RP-090553 | 242  | Correction of local area base station coexistence requirements                     | F | 8.3.1 | 8.4.0 | RInImp9-UMTS1880T DD |
| RP-44 | RP-090554 | 241  | HS-SICH Type2 performance for 1.28Mcps TDD MIMO                                    | F | 8.3.1 | 8.4.0 | RANimp-LCRMIMO       |
| RP-45 | RP-090818 | 246  | Aligning IMB BS conformance requirements between 25.105 and 25.142                 | F | 8.4.0 | 8.5.0 | MBSFN-DOB            |
| RP-46 | RP-091260 | 249  | Correcting code rate in E-DCH FRCs for 1.28Mcps TDD                                | A | 8.5.0 | 8.6.0 | TEI7                 |
| RP-46 | RP-091276 | 250  | Testing in case of Rx diversity, Tx diversity and MIMO                             | F | 8.5.0 | 8.6.0 | TEI8                 |
|       |           |      |  |   |       |       |                      |
